VERBATIM REPORT OF PROCEEDINGS
BEFORE THE HONORABLE JAMES L. ROBERT
UNITED STATES DISTRICT JUDGE

APPEARANCES:

For the Plaintiffs:	ROBERT MORGAN
	JEAN CURTIS
	MICHAEL BURLING
	JOHN KNOX

For the Defendant:	SHANNON JOST
	SCOTT JOHNSON

Reported by:	NANCY L. BAUER, CCR, RPR

1 OCTOBER 9, 2009

9:00 A.M.

PROCEEDINGS

2

3 THE COURT: The clerk will call this matter.

4 THE CLERK: CR07-1957, Aerotel v. T-Mobile. Counsel,
5 please make your appearances.

6 MR. KNOX: John Knox on behalf of the Aerotel
7 plaintiffs. I'm local counsel with Williams Kastner, and
8 arguing today will be three attorneys from Ropes and Gray:
9 Robert Morgan, Jean Curtis, and Michael Burling.

10 MS. JOST: Good morning. Shannon Jost from Stokes
11 Lawrence for the defendant.

12 MR. JOHNSON: And Scott Johnson on behalf of T-Mobile
13 as well.

14 THE COURT: Thank you. Counsel, let me give you
15 three minutes of the world of Markman according to Judge
16 Robart. My kindred spirit, Judge Rosenbaum, from Minnesota,
17 and I, have made a cottage industry of going around the
18 country and trying to change the way these hearings are done.
19 Take the following for what you want to make out of it:

20 The first is, as a general rule, if you want to do an
21 overview of the patent or a tutorial, schedule that about two
22 months before the Markman hearing. By the time you get here,
23 we will have invested, between me and my law clerk, a couple
24 hundred hours getting familiar with the patent. It makes no
25 sense for you to then come in and say, Judge, this is the way

1 the patent works, when we've already put that investment in.
2 It makes much more sense doing it well ahead of time. It
3 would make our job easier. I think both of us are of the
4 view that, most times, tutorials about patents are
5 particularly worthless except in cases of extremely
6 specialized fields of endeavor, they do make some sense then.

7 Secondly, you can assume that we have read everything. We
8 have read everything with great care. So in the limited time
9 you're given to do argument, I would urge you to do argument.
10 Don't simply repeat what's in your briefing, because if you
11 do, you'll notice me sort of glaze over and stare off into
12 the distance, which is a sure sign that I probably have
13 understood the point you're trying to make.

14 Third, it has become extremely popular to do PowerPoint
15 presentations. They are completely worthless. What is of
16 value is my questions to you and what I'm interesting in, not
17 what you think I need to know and want to take your very
18 scarce 10 or 20 minutes putting up in a PowerPoint
19 presentation. And since I'm sure each of you have brought
20 very extensive PowerPoint presentations to use, just know
21 that you're welcome to do so. If you hear a loud snoring
22 sound, you'll know it's coming from me.

23 So with those comments in mind, the way I like to do these
24 is, you have a number of terms that we're going to define. I
25 appreciate you getting together and coming up with an

1 allocation of the time. I think that's productive on your
2 part. I also think it's productive to set the order that you
3 want them taken in. I completely agree with you that special
4 exchange ought to go first and ought to get the most
5 attention.

6 I may or may not ask questions during your time. I also
7 may, on occasion, simply say to one side, you don't need to
8 discuss this term, or if you do want to discuss this term,
9 you can do so very briefly. If that's the case, don't read
10 anything into it other than, I think we thoroughly understand
11 your position from your briefing, which is what you're trying
12 to accomplish. I'm simply not going to have you get up there
13 and waste your time repeating what you've previously said.

14 The conclusion of this is your opportunity to give us a
15 more global overview. One of the things that you'll often
16 hear when judges talk about Markman hearings is the fable
17 about three blind men and the elephant. Many times you're
18 talking about specific terms. That's important, but you need
19 to remember we're instructed to find them in the context of
20 the overall patent, and it is productive for us, at times, if
21 you'll step back and tell us all how your claim construction
22 fits into that overrule patent, which is something that's not
23 done in your briefing and is oftentimes not done in oral
24 argument, and for us it is extremely helpful.

25 We will go until about 10:30, sometime in there, and then

1 take a short break so everyone can get up and stretch their
2 legs, use the restroom, and what have you.

3 Having said all that, it seems the first term that we're
4 talking about is special exchange. Mr. Morgan, are you doing
5 this?

6 MR. MORGAN: Yes, Your Honor.

7 THE COURT: All right. Please proceed.

8 MR. MORGAN: Thank you, Your Honor. I almost say
9 this apologetically, but you do have a PowerPoint book up
10 there. I might use one or two slides, Your Honor.

11 THE COURT: That's fine. I have no problem with you
12 using illustrative -- my concern is when you're going to put
13 up what is Markman, what is the federal circuit, what is the
14 patent, and it takes a while to get there. That's not good
15 use. Go ahead, sir.

16 MR. MORGAN: That's not going to happen. I'll start
17 off, and this is important. This is an issue with respect to
18 this whole issue of special exchange. The patent talks about
19 two ways the system can be done. One, the system can operate
20 from any available telephone, or two, the system can operate
21 from dedicated telephones. And both of those are described
22 for the patent, both types of embodiments.

23 Let me skip through so we don't waste your time here.

24 You have our definition, Your Honor, of special exchange.
25 It's here in slide SE1. The slides are broken up into

1 sections, and there are tabs for each section. A lot of this
2 definition, Your Honor -- actually, all of it, by and large,
3 is not disputed. I don't think, as we'll see in a few
4 moments, T-Mobile disputes that the special exchange is the
5 point of view of the calling telephone behind the exchange or
6 equipment. That means it's reached through the exchange or
7 equipment that first handles the call. Special exchange
8 includes your router, computers and memory, and software to
9 carry out the functions.

10 THE COURT: Let me stop you. Let's go back to the
11 first principle. Special exchange is not defined in the
12 patent; is that correct?

13 MR. MORGAN: There's words like central exchange.
14 The distinction is being made in the patent between the local
15 exchange and the center exchange or exchange for purposes of
16 this invention.

17 THE COURT: When I'm in that situation, how bound am
18 I by the teaching of the federal circuit that I am to use
19 words such as "special exchange" consistently throughout the
20 entire patent?

21 MR. MORGAN: You do, Your Honor. We don't dispute
22 that it is used consistently in this patent.

23 THE COURT: Thank you. Proceed.

24 MR. MORGAN: So as I say, there does not seem to be a
25 real dispute as to what is in our -- our definition of

1 instruction insofar as it goes. I've got a number of
2 PowerPoints here that I think would be repeating what is in,
3 basically, our brief, explaining why these various elements,
4 we believe, should be in the construction. As I say, I don't
5 seriously believe there's a serious dispute as to that.

6 So we should move on very quickly to T-Mobile's
7 construction of the term special exchange. And what's
8 highlighted here, Your Honor, is what's really in dispute.
9 What's really in dispute is that T-Mobile wants to, in our
10 view, engraft onto the definition of special exchange the
11 requirement that it be reached by dialing the telephone
12 number from any available telephone. That's what is in
13 dispute here.

14 THE COURT: Well, let's break that down into two
15 parts, if you would. Let's talk about telephone number, and
16 then let's talk about any available telephone.

17 Do I understand that your contention is that one of the
18 deficiencies in T-Mobile's definition is that not only can
19 you use a telephone number, but then once you are inside the
20 special exchange, you may not have a telephone number, you
21 may simply have a code?

22 MR. MORGAN: No, Your Honor, I don't think either one
23 of us are really saying that. There are two things. One is
24 a number. They say it's a telephone number; our view is it
25 doesn't necessarily have to be a telephone. 411, for

1 example, is not a telephone number. People think it is, but
2 it is not a telephone number, but it is a number that's
3 identifiable. When you dial 411, you get to the 411 people,
4 but you're not dialing a telephone number. A telephone
5 number is another meaning. But what happens with this system
6 is you dial or enter one way or another, and it specifically
7 talks about entering.

8 THE COURT: I assume you're disclaiming dialing as
9 rotary phones only?

10 MR. MORGAN: Yes. We'll get to that. That's one of
11 the terms we discuss, I believe, by Ms. Curtis. Dial can be
12 a rotary phone, dial can be punching in the numbers, dial can
13 be -- I've got my iPhone. There are numbers in the iPhone
14 that I didn't put in there. I didn't punch it in. They came
15 that way with the program. I don't punch any numbers for
16 that call to be made. I just touch a screen and the call is
17 made.

18 THE COURT: You would include in dial, then, the
19 concept of a machine automatically dialing the number?

20 MR. MORGAN: Yes, sir, absolutely. And, in fact, as
21 Ms. Curtis will note, there is a discussion of a redialer,
22 it's called, inside the special exchange that dials a number,
23 and nobody pushes any buttons in that thing. That's purely
24 mechanical in the software.

25 THE COURT: All right.

1 MR. MORGAN: So you have that number. Then you have
2 a special code, and the special code is an identifier. The
3 patent uses the word identifying signals. And the special
4 code is associated with an account associated with --
5 accounts set up with a special code, so at some point during
6 one's use of the system, at some time that special code has
7 to be entered and the system can say this is an accurate --
8 this is a correct special code, it's a valid one. It's a way
9 of making sure somebody using the system is supposed to be
10 using the system. And the system looks at the account that's
11 associated with that and says how much money is in this
12 account?

13 So there are two numbers that we talk about. One is the
14 number of the special exchange, and that's how one reaches a
15 special exchange from a phone; the other is a special code,
16 and that's information that is sent, a number that is sent
17 off to the system so the system can say, aha, this is a
18 prepaid telephone call that's coming into me and I can now
19 check, yes, this is a valid code, this is one that's been
20 issued. You don't want somebody to be able to counterfeit or
21 make codes that haven't been issued. And having done that, I
22 can look, the special exchange can look and see if there's
23 money deposited for this special code that will cover the
24 calls that's coming in. Those are the numbers, Your Honor.

25 THE COURT: All right.

1 MR. MORGAN: Okay. So what's the issue up here? The
2 issue is the requirement, as I say, by dialing this telephone
3 number. And the reason we object to telephone number is
4 because telephone number, I think nobody disputes, has a
5 pretty well defined meaning of the word. It's a ten-digit
6 number. It has to have an area code, it has to have the
7 seven other digits associated with it. And that's not
8 necessary. Like I say, 411 is a number which can be dialed
9 and get you to where you want to go, 411 service. And
10 second, and this becomes -- this, I think, is the real
11 dispute: Any available telephone.

12 And this is why I started off the discussion, Your Honor,
13 pointing out in the background of the invention that there
14 are two -- two types of telephones, actually, disclosed in
15 the patent that can be used, and the system can be of two
16 different types: One, any available telephone system, and
17 one is a system that uses dedicated phones; in other words,
18 phones that can only be used with the system.

19 What T-Mobile seems to want to do is limit the claim to
20 the former; that you have to have every system be reachable
21 and be able to be used by any available telephone. And what
22 we say to that is just a start, and this is at Slide SE16 of
23 the tab of special exchange -- is -- and I don't want to use
24 the term pejoratively, but it's kind of an effort to ease
25 into Claim 23, the limitation that's not there. The

1 limitation that is found specifically in Claims 1 and 9 and
2 the claims that depend from them, and that's going to be
3 important because a lot of discussion that we're going to be
4 talking about that's -- that T-Mobile is relying upon, where
5 Aerotel talked about special exchange, certainly from the
6 prior cases, an SET case that they're talking about, Claim 9,
7 which explicitly requires any available telephone. Okay.

8 So in addition, we're going to see that T-Mobile also
9 relies upon things that were said during patent prosecution
10 and re-examination, and again the devil is in the details
11 here. It's going to be very important to see what was said
12 about specific individual claims concerning any available
13 telephone.

14 We don't disagree, Your Honor, that in making general
15 descriptions of an overall system, that Aerotel described the
16 system and all the possible features, which includes any
17 available telephone in making a general, overall description
18 of the system. But what we're going to show you is that,
19 just as a federal circuit said, every claim doesn't have to
20 have every feature, every claim doesn't have to cover every
21 embodiment of the patent. So what you have is an embodiment
22 in Claims 1 and 9 and claims dependent on them which are,
23 indeed, limited to any available telephone and require it,
24 and Claim 23, which doesn't require it.

25 Claim differentiation is important. Reading the claims in

1 the context of each other. So what is T-Mobile to do? They
2 try to tell us that they want to rely upon prosecution
3 history. What they want to rely upon is these discussions in
4 the prosecution history about any available telephone. And
5 let me refer you -- we'll start, if you would, Your Honor, on
6 SE18. There's a section on the tab that says "special
7 exchange." And what they essentially seem to rely upon are
8 statements, again, general statements about the total
9 possible feature of the invention, and any available
10 telephone is included.

11 Interestingly enough, Your Honor, when one reads those,
12 and they are in the various exhibits actually cited, Exhibits
13 3, Exhibit C, Exhibit -- those are the two main ones, but
14 others. When one reads those discussions, one thing comes
15 through very clear that seems to be not focused on by
16 T-Mobile. What's very clear is those discussions separate
17 the feature of a special exchange and the feature of any
18 available telephone.

19 THE COURT: Mr. Morgan, are you telling me that in
20 the first column of the patent, when it's talking about the
21 telephone system, the field of invention and the background
22 of the invention, that I should ignore the language such as,
23 "There has been a long felt need for a system in which
24 enables making telephone calls, including local or toll calls
25 conveniently, inexpensively, and from any telephone," and

1 then it goes on to say, "should be able to accomplish the
2 call from the nearest available telephone."

3 MR. MORGAN: No, Your Honor, you do not ignore those.

4 THE COURT: Does that language not apply to 23?

5 MR. MORGAN: No, it does not, Your Honor. That --

6 THE COURT: Let me talk when I talk. You're going to
7 get in bad trouble if you do that.

8 MR. MORGAN: I understand.

9 THE COURT: Where is the legal support for your
10 proposition that the general description of the invention
11 doesn't apply equally to all the claims?

12 MR. MORGAN: Your Honor, there is further
13 description, and I pointed it out, which talks about that
14 this invention, and it's there on that first page, down
15 around -- actually, 5 through 11 specifically talks about
16 public telephones dedicated to use. Dedicated to use. Those
17 are dedicated phones. And the same thing happens at the end
18 of the patent, Column 6, line 6 through 8, where it talks
19 about you can have a system that can be any available
20 telephone, or you can have a system from dedicated
21 telephones. And that's Column 6, Your Honor, lines 6 through
22 8, wrapping up the discussion. And the reason that's wrapped
23 up is there is a whole section in this patent about dedicated
24 telephones that can only be used with the system.

25 So, yes, there certainly is a discussion of that, and yes,

1 that's important, and it's important for claims.

2 Now, let me make it clear, Your Honor, Claim 23 doesn't
3 exclude a system that can be used from any available
4 telephone. It doesn't exclude a system that can only be used
5 with special dedicated phones. Claim 23 is a broader claim
6 than Claims 1 and 9. The purpose of Claim 23 is to encompass
7 both kinds of systems. Dedicated phone or any available
8 phone or both is not limited. That's the whole point of
9 different -- differences. There are other differences, but
10 the primary differences between Claims 1 and 9 and 23 is that
11 23 is not limited, just as the patent describes. There can
12 be a system with dedicated phones that only work with the
13 system, there can be a system where any phone works with the
14 system. Claims 1 and 9 are limited to a system where any
15 phone can work with the system. Claim 23 is not so limited.
16 It works either with any phone, or it can be a system like
17 that, or it can be a system where it's dedicated phones. It
18 is sufficiently broad to include both. And that is our
19 point.

20 What has happened here, Your Honor, is that T-Mobile is
21 trying to take that any available telephone and narrow Claim
22 23, to try to say Claim 23 can't cover both kinds. It can
23 only cover any available telephone. But any available
24 telephone is a limitation that is not found in that claim.

25 And yes, Your Honor, you look at the background of the

1 invention, but you have to also look at other parts of the
2 patent, including Claim 5 through 11 where it talks about
3 public phones dedicated use by prepaid parties. So there are
4 two aspects, two ways this system can work, two kinds of
5 systems. Claim 23 covers both of them.

6 THE COURT: Before you leave, you have about five,
7 six minutes left, talk to me about the re-examination.

8 MR. MORGAN: That's where I'm going right now.

9 THE COURT: It seems to me that that really runs
10 contrary to the argument you're making at this time.

11 MR. MORGAN: With all due respect, Your Honor, it
12 does not.

13 THE COURT: Somehow I thought you were going to say
14 that.

15 MR. MORGAN: Yeah, and the reason is this, and I want
16 to go back to the point I was making. It was general
17 discussion, general discussion at the start of the -- what's
18 called the remarks session, of the overall system, and it
19 discussed all the possible features of the system. And
20 what's important in that discussion is that it discussed
21 special exchange and any available telephone separately as
22 two separate things. All right?

23 Now, it is -- and I'll get to these charts in a moment and
24 explain -- but what's important, and I'd like to go right to
25 this, Your Honor. What matters in a re-examination is what

1 was said about specific claims. Arguments were made, all of
2 the features were set out, all the possible kinds of features
3 were set out in the early discussion. Then when one deals
4 with specific claims, what one has to do is look at -- is
5 deal with the specific claims and the terms of those claims.
6 You cannot distinguish prior art on a feature that's not a
7 claim. So if you look at this chart --

8 THE COURT: And the two claims are 1 and 23?

9 MR. MORGAN: 1 and 9 and 23. We're only worried
10 about 23 in this case.

11 THE COURT: I understand. But in the re-examination,
12 23 was a specific topic of conversation.

13 MR. MORGAN: As was 1 and 9, and that's why I'd like
14 to point you, Your Honor, to this chart, SE20, that I put up,
15 and I know you don't like charts, but I think this one is
16 important, because what you'll see is that in the discussion
17 of the claims, whenever the word any available telephone was
18 used as a distinction of prior art, Aerotel made very clear
19 it was only Claims 1 and 9 being distinguished on that basis.
20 When Claim 23 was being talked about, that was not stated.
21 You can see, for example, in the first one: "Moreover, like
22 Claim 9 and Claim 1." This is the instruction to Claim 1 and
23 Claim 23, but discussing claim -- only in discussing Claim 1
24 is any available telephone distinction used, not Claim 23.
25 And more important, Your Honor, as important, as I said

1 before, they're trying to engraft, how do they get any
2 available telephone into this patent claim? By engrafting it
3 onto the word special exchange. Well, guess what? Look at
4 the distinction here. There are two separate distinctions
5 made. These two elements are treated separately. Special
6 exchange and any available telephone. You don't have to
7 treat them separately if the lack of any available telephone
8 says there's no special exchange. They treated them
9 separately, they treated them separately in the general
10 discussion and treated them separately here.

11 There's been a lot of discussion, Your Honor, about some
12 charts that were used and some drawings that were used.
13 Interestingly enough, those drawings -- those drawings, when
14 they were referred to in the re-examination, were referred to
15 on any available telephone aspect only in connection with
16 Claim 1 or Claim 9, the two claims that didn't require.
17 Claim 23, no reference was made to those drawings in any
18 available telephone. Throughout the re-examination, this is
19 consistent. This is consistent throughout the
20 re-examination, general discussion, general discussion has
21 special exchange and any available telephone as separate
22 elements, separate items. When you come to the claims, the
23 only item discussed with respect to Claim 23 is special
24 exchange. The only time any available telephone is discussed
25 is with Claims 1 and 9.

1 Now, these charts that you're able to see, they point
2 out -- and I'll go to one right here. In fact, I'll go to
3 right to this one right here. What they point out is, it
4 says, "Golden Prior Art. No special exchange. Not from any
5 phone." And then "Mearns." But you'll notice these are
6 different. They like the first one, but not the second one,
7 and here's why: Remember I said the special exchange is
8 behind the local exchange? In all this prior art that's got
9 this, paren, "not from any phone," the point was each one of
10 these pieces of prior art has its exchange, all right, not
11 behind the local exchange; therefore, the reason it is not --
12 one of the reasons it's not a special exchange is because
13 it's not behind the local exchange. Right?

14 What is a corollary of that? A corollary of that is you
15 can't reach it from any available telephone because you can't
16 call through the local exchange. It's not saying that any
17 available telephone is a criterion to be a special exchange.
18 What it's saying is that if you're not behind the local
19 exchange, if you are not a special exchange, ipso facto, you
20 can't be any available telephone.

21 They're taking -- that's going one direction. If you're
22 not a special exchange, ipso facto, you can't be any
23 available telephone because you can't reach something that's
24 not behind the local exchange from any telephone.

25 It doesn't go the other direction. Just because you can't

1 reach from any available telephone doesn't mean you're not a
2 special exchange. You can have a special exchange set up
3 right behind the local telephone system and still not have
4 any available telephone. That's what Mearns talks about.

5 THE COURT: Do you have the Kamil slide?

6 MR. MORGAN: They are actually in this joint claim
7 chart, Your Honor, but the four slides are right here,
8 actually, and they're in your book at SE22 and 23.

9 MS. JOST: Your Honor, the full presentations are in
10 paper Exhibits B and 5 to the joint claim chart.

11 MR. MORGAN: These are the four we seem to be relying
12 on, and you'll notice that three of them have no special
13 exchange with the parentheses. The fourth one, no special
14 exchange, and not from any phone. The reason is this: On
15 the fourth one, yes, you can have the -- the exchange is
16 behind the local exchange, meets that requirement, but it's
17 not special for other reasons: It has other defects.

18 It also is not from any phone because it will not accept
19 calls from any phone. It's been set up that way. The point
20 being here, Your Honor, is that this has been distorted. I
21 don't mean that deliberately. This has been misapprehended,
22 I think is the word I'd use.

23 The whole purpose of this presentation is to show that
24 special exchange has to amend the local exchange. If it's
25 not, there are two consequences: One, you don't have special

1 exchange, and two, you can't reach it from any telephone.

2 But that does not say that -- that's a reason in one
3 direction. That does not say, however, that the reasons you
4 don't have the special exchange is because it's not reachable
5 from any telephone. And that's why when these charts are
6 referred to, then, in the discussions, and in the discussion
7 of the claims, this distinction about any available telephone
8 and the chart on any available telephone is referred to only
9 in connection with Claims 1 and 9.

10 THE COURT: I'll ask you this question, and then ask
11 you to sit down. In regards to the re-examination, the Kamil
12 '275 invention, prior art, does that apply to Claim 23?

13 MR. MORGAN: I'm sorry. I'm not sure I understand,
14 Your Honor. I apologize.

15 THE COURT: One of the slides, not in your
16 presentation, but in the material that we've reviewed, is
17 that in the re-examination, the reference to Kamil '275
18 invention, and there's a slide similar to this, does that
19 apply to Claim 23?

20 MR. MORGAN: That is in this sense, not in limiting
21 23. 23, as I said, is broad enough to cover a system that
22 operates from any available telephone as well as one that
23 does not. So in that regard, yes, it does apply. But if
24 those slides are read to say you have to have any available
25 telephone in the claim, no, it does not apply. But it

1 applies generally. As I say, the claim itself is broad
2 enough to cover both kinds of systems. That's why there's no
3 limitation to it.

4 THE COURT: Okay. Then I understand that argument.
5 Thank you, sir.

6 MS. JOST: Your Honor, I want to begin by focusing on
7 the time frame of 1985, which is the time the application was
8 filed. That's the relevant time frame for purposes of
9 deciding what the proper construction of the claims is.

10 At that point, mobile phones were not ubiquitous. The
11 inventor was not talking about an iPhone. The inventor was
12 talking about the problem of a user who is away from his home
13 or office telephone and is forced to rely on a public
14 telephone or ask a friend or ask a customer if they could pay
15 them back for the charges of a phone call. That's why the
16 problem described in the '275 patent is how to provide for a
17 convenient way of making telephone calls when people are away
18 from home without shuffling through pockets of change or
19 looking for a specially equipped phone. The invention
20 claimed by '275-10 provides a method for making prepaid calls
21 from any available telephone, and the special exchange is the
22 sole key to that accessibility.

23 The key difference to the parties' constructions, as
24 counsel pointed out, is that the special exchange of the '275
25 patent, and this is the same special exchange that appears in

1 every claim for the patent, must be accessible by dialing its
2 telephone from any phone. And the intrinsic record shows
3 that Aerotel repeatedly and consistently told the patent
4 office to distinguish the prior art that the special exchange
5 had to be accessible from any phone.

6 Now, counsel has said that there is two different systems
7 claimed in the Kamil patent, that one of them allows calls to
8 be made from any available telephone, and the other allows
9 calls to be made only from public telephones. I want to turn
10 to a slide which isn't in your materials but which shows
11 Figures 1 and 2 of the Kamil patent side by side. And if you
12 look at them side by side, it should be 126, if you look at
13 them side by side, Claim 23 in set C requires dialing the
14 special exchange. And I have a blowup of Figure 1 right
15 here. If you look at this, Block 14 very clearly says,
16 "dialing for special service." When we look at Figure 2 --
17 it's Slide 114.

18 THE COURT: This is when everyone needs their
19 16-year-old son.

20 MS. JOST: I'm looking around for one right now.
21 Slide 114. Well, we can look at the patent itself. The
22 figure that describes the dedicated system discussed in the
23 figure is Figure 2 of the patent. Figure 2 does not show
24 dialing the special exchange. So Claim 23 simply does not
25 reach using a public dedicated telephone. If there is a

1 system claim for the patent that addresses using a public
2 telephone, that's Claim 14, which depends from the system of
3 Claim 9. But Claim 23 clearly requires -- we're not going to
4 have that in front of us. Sorry for that technical detail.
5 But the point is, there are not two different systems
6 explained.

7 Aerotel told the PT0 repeatedly in prosecution to overcome
8 the prior art rejection of Claims 1 and 23, that the special
9 exchange had to be accessible from any phone. In its 2001
10 reply action, this is what they said: To reach the special
11 exchange of the Kamil patent, the user first dials a
12 telephone number to access or reach the special exchange.
13 This argument was made in specific reference to Claim 23, as
14 you see in the lower portion, which is drawn from page 5.
15 None of the references applied shows the claimed invention is
16 described in Claims 1, 9, and 23.

17 Aerotel made the same arguments in 2002. Again, Claims 1,
18 9, and 23 were rejected, and at pages 7 and 8 of its reply,
19 Aerotel told the PT0 that the whole point of locating the
20 special exchange behind the local exchange is so that it can
21 be reached by dialing a number -- from any available
22 telephone by dialing a telephone number. That wasn't an
23 argument that was made only in reference to Claims 1 and 9.
24 It was made in specific reference to Claim 23, as we see in
25 pages 8 and 9.

1 Again, this is not a coincidence of the location of the
2 special exchange, it's the whole point of locating the
3 special exchange behind the local exchange, and Aerotel
4 admitted that there's more than ample support in the
5 specification for that interpretation.

6 Also in its 2002 reply, Aerotel explicitly relies upon its
7 discussion of the special exchange in connection with Claims
8 1 and 9 when it came to the specific rejections of Claim 23,
9 I'm on Slide 7 in the special exchange section, that Aerotel
10 referred back to its interview with the examiner wherein it
11 described the special exchange as being reachable from any
12 phone. And at the end of that interview, the examiners
13 issued an interview summary that said, "We were convinced by
14 applicant's argument that Moller failed to teach the
15 capability of using any phone as a special exchange separate
16 from the local exchange." On the basis of those
17 representations, and on the basis of the conclusions that the
18 examiners drew, they withdrew their rejections to Claims 1,
19 9, and 23 based on Moller, and Aerotel acknowledged that in
20 its specific discussion of Claim 23.

21 On page 18 of Exhibit G, this is the 2002 reply, Aerotel
22 said, "The examiner has already agreed that Moller doesn't
23 show a special exchange is met by the patent owner." And
24 Aerotel addressed the Mearns reference, and counsel showed
25 you some slides, I'll show you one right here, that Aerotel

1 showed in connection with the Mearns reference.

2 The point that Aerotel made, and the footnote on the
3 bottom of page 18 of that 2002 reply, is that it's not enough
4 for the special exchange to simply be located behind the
5 local exchange, because as Aerotel points out on this slide,
6 the exchange of the Mearns reference is, in fact, located
7 behind the local exchange. But it doesn't show the special
8 exchange of the Kamil patent, because for the Mearns
9 reference to work, the line has to be supervised by AT&T.
10 There has to be a change at the local exchange so that it can
11 handle the zero plus dialing of the AT&T system. The
12 location is not enough. There has to be an ability to reach
13 the system from any available telephone, and that's simply
14 not present in the Mearns reference.

15 Now, Aerotel also admitted in prior litigation -- this is
16 on Slide 9 -- that the special exchange of Claim 23, not of
17 any other claim, has to be configured to receive incoming
18 calls from any available telephone. In the NACT claimed
19 construction report, Aerotel construed Claim 23, the language
20 is clear, that the switch is configured to be able to receive
21 incoming calls from telephones which are not location
22 specific.

23 Now, location specific is the language that Aerotel used
24 at times in the prosecution history, indicating from any
25 available telephone.

1 Now, one of Aerotel's primary arguments is that because
2 the language "from any available telephone" appears in the
3 preambles of Claims 1 and 9, but not in the preamble of Claim
4 23, that claim differentiation should apply. This argument
5 fails on a number of reasons. First, Aerotel admitted in
6 prior litigation, as shown on Slide 10, Aerotel's expert
7 reported in the NACT case that the preamble of Claim 1 simply
8 described purpose of the invention. When he reads it in
9 context with the entire patent, as one must do in order to
10 construe a claim, he doesn't believe the preamble has any
11 technical limitation. The purpose of the preamble, the
12 general default of the preamble is that it is merely evidence
13 of the body of the claim. It's not intended to add technical
14 limitations, and Aerotel admitted here that it doesn't.

15 Now, Aerotel relies very heavily on the principle of claim
16 differentiation, but that's a secondary principle of claim
17 construction. We don't get there in this case. First, there
18 are many differences between Claims 1 and 23; secondly,
19 Aerotel has already conceded that the preamble of Claim 1
20 isn't a limitation. But we also have to look at the claim
21 terms in view of both the claim as a whole but also the
22 entire patent. And as the federal circuit has made very
23 clear, claim terms are presumed to be used consistently
24 throughout the patent. And I think Aerotel has conceded that
25 there is only one special exchange of the patent.

1 We filed our briefing almost a year ago, actually, over a
2 year, and there have been several federal circuit decisions
3 that do such on claimed construction in the meantime, and I
4 wanted to draw your attention, I have the cites on the slide,
5 to two of them.

6 THE COURT: You've got about five minutes left.
7 Let's concentrate on a different question before you sit
8 down. I'd like you to respond to Mr. Morgan's argument that
9 telephone number, taken in plain meaning, is a ten-digit
10 device that allows you to reach someone, and that your use of
11 telephone number is really inappropriate when we're talking
12 about a signal which gets you to a particular location of
13 411, a series of impulses or whatever.

14 MS. JOST: We use the word telephone number because
15 that's the language of both the patent and the prosecution
16 history. The specification is very clear that the customer
17 makes their prepayment and in exchange receives the telephone
18 number of the special exchange. The concept of the telephone
19 number is that this is a number that can be input by the
20 customer on their phone and which will be connected through
21 the local exchange, through public switch telephone number to
22 reach the special exchange. It's a number that requires
23 customer input, and this is pervasive throughout the patent
24 and prosecution history. Dialing means you pick up the
25 receiver and you enter the telephone number. You know, I

1 don't think we would dispute that the number must be ten
2 digits versus dialing the 411 number. The concept is this
3 must be a number that is input by the user and is connected
4 through the public switch telephone network to reach the
5 special exchange. And it has to be a number that could be
6 dialed from any phone, not just from -- and I'll use the
7 wireless system as an example -- not just from, as in the
8 case of the T-Mobile system, a wireless device which is
9 activated on T-Mobile's wireless network and which is
10 associated with a T-Mobile prepaid account. You can't pick
11 up the phone on the bench and make a prepaid call using
12 T-Mobile's prepaid system. I can't do it during -- using my
13 phone because, although I shouldn't admit it here, I have a
14 Verizon mobile phone. You can't make a prepaid call.

15 THE COURT: You might want to turn around and look at
16 the audience when you say that.

17 MS. JOST: It's an employee account from my husband.
18 I shouldn't admit that, either.

19 The point that Aerotel made repeatedly, and when you look
20 at some of Aerotel's slides, I was looking for the Kamil '275
21 slide that you referenced earlier. This is at page 17 of our
22 presentation. We're looking at 1985, and the concept is that
23 the user picks up the receiver and dials the number. Aerotel
24 shows it here as a 1-800 number. Does that respond to your
25 question?

1 THE COURT: It does. Go ahead and wrap up.

2 MS. JOST: Okay. Looking at a few of the most recent
3 federal circuit decisions, and I don't have the slide up in
4 front of me anymore, there is ample support for a requirement
5 that where the patent described the invention as requiring
6 certain features, that those features need to be included in
7 plain terms. There are several recent federal circuit cases
8 that discuss that. I did note on that same slide, just for
9 fairness, there is a recent federal circuit case where,
10 contrary to this case, the limitation at issue was included
11 in the body of some of the claims, it wasn't in the body of
12 the asserted claim, but it was in the body of the claim that
13 depended from the asserted claim. That's not our case. Our
14 case here is the language from any available telephone is in
15 the preambles of Claims 1 and 9. Aerotel has admitted in
16 prior litigation that those don't constitute any technical
17 limitation. And we're faced with the overwhelming support
18 and specification, the prosecution history, the
19 re-examination history, and the prior litigation, where the
20 special exchange, the single special exchange for the patent,
21 is described as reached by dialing its number from any phone.
22 And to the extent that there is a system claimed in the
23 patent that requires a public dedicated telephone, the
24 special exchange must be reachable from both. That doesn't
25 remove the limitation from its special exchange at any rate.

1 THE COURT: All right. Thank you. Mr. Morgan, I'm
2 going to ask you to step back up to the podium. In order to
3 attempt to get some comity with Judge Holwell in the
4 telephone matter, we've delayed quite a bit. Can you point
5 me to where in your briefing, which is now almost a year old,
6 I guess, you make this argument on 23 it's different from 1
7 and 9?

8 MR. MORGAN: Yes, Your Honor.

9 THE COURT: Specifically by page.

10 MR. MORGAN: Yes, Your Honor. In our main brief, our
11 opening brief, Your Honor, starting at the bottom of page 14,
12 line 20 where it says, "In contrast."

13 THE COURT: Just give me the cite.

14 MR. MORGAN: Bottom of 14 and over to 20 -- over to
15 15 there. In addition, I actually follow on because we also
16 deal with the previous cases which dealt with Claim 9, which
17 has that clause in it. So it would be the bottom of 14, over
18 to 15, to the start of the next discussion, balancing special
19 exchange. And then in connection with -- in our reply brief,
20 because that's when they, in their arguments, brought out,
21 made these arguments. In our reply brief, we specifically
22 talk about, starting on page 3, starting out how each claim
23 doesn't have to have every possible feature, and then we talk
24 about prosecution history and distinguishing between claims
25 that have this feature in them, and then line 23, which does

1 not, and that actually carries over to starting at page 3
2 through 10.

3 THE COURT: All right. Thank you.

4 Ms. Curtis, I think you're doing dialing said special
5 codes?

6 MS. CURTIS: That's correct, Your Honor.

7 Dialing the said special exchange: Aerotel's construction
8 of dialing the special exchange means that it's sending a
9 signal that represents a number. If you're dialing a special
10 exchange, you're sending a signal representing a number to
11 cross-communication with the special exchange.

12 Now, T-Mobile -- and you'll note the claim language itself
13 simply states dialing said special exchange. The language of
14 the claim itself does not address, for instance, who or what
15 performs the dialing. It does not say that it has to be a
16 telephone number as opposed to some other kind of number, say
17 an identifier. It doesn't state that it has to be done using
18 a rotary or a dial -- a tone phone.

19 Now, that said, maybe the various combinations could be
20 used, it's just the claim doesn't require it. If you look,
21 however, at T-Mobile's construction --

22 THE COURT: Go back to yours for a moment.

23 MS. CURTIS: Sure thing.

24 THE COURT: It seems to me the difficulty that I have
25 with yours is you've take the word "dialing" and eliminated

1 it and replaced it with "sending a signal," and I'd like you
2 to address for me, please, why I can make that leap. I mean,
3 dialing, my dear departed mother would be happy to tell you,
4 is something you do with your fingers. Sending a signal, is
5 that voice command, is that not dialing the phone?

6 MS. CURTIS: Your Honor, there is no suggestion here
7 that it couldn't be done a different way, but this is broader
8 than that. And as you might remember from looking through
9 the papers, one of the things that we point to in
10 the specification, is we believe the specification amply
11 supports the possibility that dialing can be sending a signal
12 that represents a number.

13 If you look to the -- let's see. It's the patent column
14 5, 44 through 52, and so the specification there, Your Honor,
15 is teaching that the dialing is sending a signal representing
16 a number. The example that we have here on DSSE2 tells us
17 that the disclosed register of the system stores the called
18 number that's received from the calling party and directs the
19 redialer to dial the number.

20 Now, a redialer does not actually push numbers in on a
21 keypad. Redial is part of the system, and that sends a
22 signal representing the number.

23 Now, if you look at -- and you can see this on page DSSE,
24 a figure representative of what I was just describing. So
25 the calling party station is at 81. 82 is the regular

1 telephone exchange. That gets you into the special exchange.
2 At the special exchange, your inference then is the calling
3 party has entered the called number prior to this point, and
4 they don't have to, and we'll get to that later. It could be
5 done once you're in the special exchange as opposed to prior.
6 Then the register stores that number. And if the credit
7 verification happens, then the register directs the redial to
8 send the signal through a router and route the call
9 appropriately.

10 THE COURT: Let me stop you there. Sorry to
11 interrupt. The patent describes that as two separate steps,
12 which, it seems to me, you've taken much together and said
13 that's dialing. What's your justification for doing that
14 when in the patent itself it clearly differentiates the two?

15 MS. CURTIS: I'm sorry, Your Honor. I'm not
16 understanding what you mean by two steps that I've meshed
17 into one.

18 THE COURT: It seems there's two steps in the '275
19 patent, one dialing the special exchange, which is the term
20 that we're seeking to define here, and then a second step,
21 which is a router in the special exchange dialing the number
22 of the called party. You seem to take the view that those
23 two steps are really one step and fall under the definition
24 of dialing said special code.

25 MS. CURTIS: I think that's not quite right, Your

1 Honor. I think what we're saying here is that by including
2 this disclosure as discussed in the specification, that we
3 just looked at, and this Figure 3, which shows the sort of
4 basic operation of the system, that the patent teaches that
5 you, one, may dial by sending a signal that represents a
6 number, because that's what -- exactly what's happening here,
7 without pushing buttons into a keypad, that's not what the
8 redialer does or the register.

9 THE COURT: Please say that again.

10 MS. CURTIS: Sure. I don't believe that where the
11 teachings, as we are looking at, in the text on page DSSE2
12 and DSSE3, which describes what occurred within the special
13 exchange using a register and the redialer and the router,
14 which is 91, basically teaches, one, of skill in the art
15 reading this patent that a signal can be sent representing a
16 number. And you don't have to do that. The number doesn't
17 have to be input. The system is inputting it, and the system
18 is using a signal to do that. And in the system, that's
19 dialing. So it teaches you broadly enough that it can be
20 done this way. And so by importing the limitations that
21 suggest that it can only be done one way is not appropriate.
22 You'd be unnecessarily narrowing contrary to principles of
23 claim construction, the appropriate construction of the
24 claim.

25 THE COURT: Apparently I didn't do a good job at

1 explaining my question. Let me try again.

2 Look at the actual patent and look at Figure 1, which
3 we've got up here. I'll throw you a life preserver here.

4 MS. CURTIS: Just in case.

5 THE COURT: And the term we're interpreting is 23C,
6 "dialing said special exchange."

7 MS. CURTIS: Uh-huh.

8 THE COURT: All right. That would seem to me to be
9 what is labeled as Block 14, "dials through special server."
10 Would you agree with me on that?

11 MS. CURTIS: I would agree with you.

12 THE COURT: All right. Are you telling me that
13 dialing said special exchange also includes 17, "dial code
14 and called number"?

15 MS. CURTIS: No, because -- well, there are ways, by
16 pushing in numbers, you can input the code and input the
17 called number. There are -- but the inputting and the
18 dialing here can be done by sending signals, but maybe it
19 need not have to be. For instance, we described the one
20 example in Figure 3. There's also the scenario that
21 Mr. Morgan referenced where hitting on the iPhone and there's
22 just one number, and then that dials Apple's phone number for
23 me. So I'm just hitting where it says "Apple." You just hit
24 the touchtone and it sends you there. The system is doing
25 it.

1 So dialing reflects something that the system can do, and
2 what it is the system can do is send a signal that represents
3 a number. So in this situation, that's what's happening.
4 It's not to say that a system could never dial the special
5 exchange by a user punching in the numbers, but you don't
6 have to do it that way.

7 And, in fact, in the T-Mobile system, how this happens,
8 Your Honor, is that you -- the calling party dials a called
9 party, and when that -- and presses send. And when that
10 happens, the identifier number of that phone number is sent
11 along.

12 THE COURT: Well, yes, no, or it depends. When I'm
13 interpreting the language in 23C, dialing said special
14 exchange, are we talking about Block 14, or are we talking
15 about more than Block 14?

16 MS. CURTIS: I'm sorry. Are we talking about 14 or
17 17?

18 THE COURT: 14 or more than 14.

19 MS. CURTIS: No, we're talking about 14 right now.
20 This is a separate limitation which has two pieces and which
21 can be done here or one here and one there, and that is
22 described in the patent as inputting. And when we get to
23 inputting, the way we define inputting, we believe the
24 appropriate construction, Your Honor, is to be somewhat
25 broader than what dialing is. Including for the fact that

1 inputting, you could essentially go through an IBR, and the
2 IBR could ask you certain questions that would then send you
3 to the special exchange. Now, you're not doing the dialing
4 then to get to -- the inputting to get to the special
5 exchange, and you're not doing any dialing. You're just
6 inputting something that can then use the system to get you
7 to the special exchange, and what the system was always using
8 was signals.

9 THE COURT: Go ahead and wrap up. You're out of
10 time.

11 MS. CURTIS: Sure.

12 Another -- let's see. Telco also tries to import into the
13 construction of dialing that it has to be the user.

14 THE COURT: Did you really mean to say Telco?

15 MS. CURTIS: No. I'm sorry, Your Honor. I meant to
16 say T-Mobile.

17 T-Mobile is trying to read in the requirement that the
18 user has to enter the telephone number of the special
19 exchange on the touchtone or rotary phone. The plain
20 language clearly does not say that. It just says dialing
21 special exchange. Who actually enters on the phone or what
22 is done once dialing happens is not something that should be
23 read in here to narrow the claim.

24 Again, Your Honor, as we were describing in connection
25 with 14 and dialing for the special exchange, the system can

1 do it, which means that the user doesn't have to punch
2 numbers in.

3 THE COURT: Well, this is the last question, then
4 I'll have you sit down. When I'm reading Column 3, line 16
5 or so, it says, "Subsequently, when the acquiring party
6 wishes to make a telephone call, which may be a local call or
7 a toll call, he uses the nearest available telephone, removes
8 the handset, and dials a special central office, as indicated
9 in Block 13 and 14.

10 That seems to me to imply that we're doing something,
11 which is remove the handset, which is technologically now
12 obsolete, at least part of the time, and dials a special
13 central office.

14 MS. CURTIS: What the user can do, Your Honor, they
15 could do that, and again dialing the special system, the
16 user, once they dial, is sending some kind of signal, but
17 what happens is it goes through the system, the components in
18 the system are what actually send it into the special
19 exchange. The user does not do that. So, the user does not
20 do that. And in the scenario where -- well, I'll stop there.

21 THE COURT: All right. Thank you.

22 MS. CURTIS: Thank you, Your Honor.

23 MS. JOST: To be clear, we again have to look at this
24 claim term as of the time of the invention.

25 THE COURT: What's your legal authority for that?

1 MS. JOST: Phillips. Phillips says that the claimed
2 term must be construed in the manner that it would have been
3 understood by one skilled in the art, reading the claim in
4 view of the entire specification at the time of the
5 invention.

6 THE COURT: Okay.

7 MS. JOST: And at the time of the invention, we were
8 not talking about T-Mobile's prepaid wireless phone service.
9 And, in fact, it is improper to ask the court to read the
10 claimed term in view of the accused system. It's fine to
11 think about it in order to provide a context for the claim
12 term, but you can't think of the word "dialing" and think
13 about how you would dial your cell phone right now. We have
14 to put ourselves back in 1985 when the application was filed.

15 And in the description of the invention, the first thing
16 the inventor says is, when the customer makes their
17 prepayment, they get, among other things, the telephone
18 number of the special exchange. And we've gone through in
19 our briefing, and I'll only touch on a few of them here, but
20 everywhere that dialing the special exchange is discussed in
21 the record, it means entering a telephone number. Now,
22 Aerotel points to a couple of places in the patent where the
23 patentee discusses a redialer. That presumes that the number
24 has already been dialed. And maybe this was a slip, but
25 counsel said during argument, once the user dials the phone

1 number, it's then stored in the system and later used to send
2 signals. Presumably, that's what our point is. The very
3 clear, ordinary, and commonly understood meaning of the word
4 "dial" is you punch in or you dial on a rotary phone the
5 numbers of the telephone. This is entirely consistent with
6 the specification and the prosecution record.

7 And I do want to look again at Figure 1, and it might be a
8 little bit more legible on the blowup. But we clearly see at
9 Block 13 going off hook and we see at Block 14 dialing for
10 special service. That is the step that Figure 1, that
11 corresponds to claim Step 23(d). When a user wants to make a
12 call, he dials the special exchange. That doesn't mean
13 whatever the system may do later to actually make the
14 connection. We're not talking about the word "redialing,"
15 we're talking about the word "dialing." And Aerotel's
16 construction is contradicted by all its representations to
17 the Patent and Trademark Office.

18 THE COURT: I think I understand your argument,
19 Counsel.

20 Who is going to argue special code?

21 MS. CURTIS: I am, Your Honor.

22 THE COURT: All right.

23 MS. CURTIS: So Aerotel's construction is that the
24 special code is a code used by the prepaid calling card
25 system. If you look at the -- in the nature of the '275

1 patent, a code is needed for the '275. And this element is
2 directed to the code itself, what is the code as opposed to
3 how the code is obtained and what it's used for, because
4 those items are discussed in other places in the claims; for
5 instance, in D, that's when the inputting of the special
6 code. And then there's the checking and verifying in
7 subsequent elements, Your Honor. So in terms of what the
8 special code is ultimately used for, that's in later
9 limitations, and those -- the elements in those will be
10 construed appropriately.

11 In terms of how you actually get the special code, there
12 is -- there's no -- all of this, as I was just talking about,
13 all of these other places talk about how it's used and how
14 the computer checks it, and you need a code in the system.
15 If you look at, for instance, SE2, credit amount is stored.
16 The special --

17 THE COURT: Would you go back to your last slide?

18 MS. CURTIS: Sure.

19 THE COURT: This is a lead-in to the point you're
20 making right now. It seems to me that you use the word
21 special code in the claim, and then your proposed definition
22 drops the word special. Don't we have to have some
23 suggestion that it's unique or special?

24 MS. CURTIS: In terms of the actual code, Your Honor,
25 I think that the type of code that it is directed in -- I

1 guess we actually do talk about the unique code in the sense
2 that there can't be two that are linked to the same account,
3 but it doesn't have to be the case that you have two. So
4 it's a code, and it can only be one code. So I guess if you
5 say it in that way, then one would characterize that as
6 unique.

7 THE COURT: I agree with you that what we're doing
8 is -- I mean, the code can't be one, two, three, and it's
9 used by everyone, because that defeats the purpose of the
10 invention. So in some manner, the trouble I'm having with
11 your proposed construction is we've eliminated this idea of
12 uniqueness or identification code so that it accomplishes
13 that purpose.

14 MS. CURTIS: I guess, Your Honor, in Telco's
15 construction -- T-Mobile's construction, I'm sorry.
16 Sometimes things do blend together.

17 THE COURT: You're on the other coast. That's how
18 you can remember this.

19 MS. CURTIS: The trouble is I never adjust to the
20 West Coast all that quickly. I just got here.

21 In T-Mobile's construction, they would like the
22 construction to be a unique number other than an identifier
23 or a telephone subscribed or a telephone number; however,
24 they never say what the unique number is. They just say "a
25 unique number" and then draw out a few exceptions. Now,

1 that, to me, can be viewed as overly broad. It would be the
2 reader might say, well, what does unique actually mean here?
3 So I think there can be a problem then in interpreting and
4 applying this claim element if you were to follow that kind
5 of construction.

6 THE COURT: All right. I understand.

7 MS. CURTIS: Now, in terms of what the -- you know,
8 how the code -- how the system is talking about the code and
9 how it's describing it is one that's used. As I said, as we
10 see on SC2, it's saying the code -- what's happening to the
11 code here, the code is being stored in the memory at the
12 special exchange. If you go to SC4, what's happening here is
13 the code is being checked. Again, it doesn't define the
14 code. It says "the code." Whatever that is is being
15 checked.

16 SC7 is again showing the customer -- we'll go back to 6
17 for a minute. 6, which is Figure 3, shows the code being
18 verified. Again, it doesn't define the code, it just says
19 gives one use of the code. And there are other elements that
20 tell you what the use of the code is. 7, the calling party
21 must have a code. It doesn't define what the code is.

22 T-Mobile's construction, which we've just talked about,
23 would require a unique, any number other than an identifier
24 of a telephone subscriber or telephone number, that the
25 calling party. So we have a unique number. They're looking

1 for some exclusions from that unique number.

2 They are also suggesting that the limitation be read in
3 that the calling party inputs it to the special exchange each
4 time he or she dials the special exchange to make a call.
5 That's putting in an awful lot of things that are not in the
6 plain language, Your Honor. Lots of restrictions here. The
7 problems with these restrictions is that -- well, there's
8 multiple problems with those restrictions.

9 Throughout its briefing, what T-Mobile does, other than
10 using the unique number even exactly, there are all these
11 places where it says what the code is going to do, but it
12 doesn't exactly tell you what the code is, which is what the
13 user needs to know.

14 THE COURT: Would I do violence to the claim term if
15 I defined it in terms of linked to one user as a way to
16 explain "special"?

17 MS. CURTIS: I would say linked to the one account,
18 because I could give you my card and it doesn't matter that
19 you use it. Or you buy a card and give it to your son, it's
20 linked to your account, not to you.

21 THE COURT: Okay. Wrap up, Counsel. I think I
22 understand what your point is.

23 MS. CURTIS: As we talked about in the T-Mobile
24 construction, they're trying to limit the code to other than
25 an identifier of a telephone subscriber or telephone number.

1 There's nothing that so limits that. And, in fact, what they
2 point to is a passage in the prosecution history. In that
3 passage it talks about not being the telephone number, the
4 subscriber's telephone number. That passage, however, does
5 not say that it can't be an identifier of a subscriber. And
6 so many phones have information in there that identifies the
7 user, such as in the cell situation, and that user, the
8 identification of that user is then passed along with the
9 signal that goes forward so that it is known that that is a
10 prepaid account, and it knows that because it's loaded up
11 with dollars at the front end.

12 One more item I think that is important to cover in
13 connection with inputting. This is all very, very
14 interrelated. The special code does not need to be entered
15 each time a call is made, and in the interest of brevity, as
16 I said, I'm happy to discuss that in full in the inputting of
17 special code when there's a little more time on that
18 construction.

19 THE COURT: All right.

20 MS. CURTIS: Is that workable for you, Your Honor?

21 THE COURT: That's fine.

22 MR. CURTIS: Okay.

23 THE COURT: Ms. Jost?

24 MS. JOST: Thank you, Your Honor. I think you hit
25 the nail on the head when you commented Aerotel's

1 construction takes the specialness out of the special code.
2 Our construction simply looks to read the term as it was used
3 in the patent and incorporating the prosecution disclaimers
4 that Aerotel made before the PT0.

5 The special code is the key to this accessibility to the
6 system, the number that the user inputs in order to identify
7 the prepayment amount that's to be used to pay for a call,
8 and Aerotel's construction would remove all of that meaning
9 from the term.

10 It has to be a unique code because it has to identify only
11 one prepayment amount. That's Aerotel's language, and that's
12 what they used to describe the code to the PT0. The word
13 "unique" is not a term of art. It simply means not like any
14 other. And it can't be a subscriber's telephone number or a
15 subscriber identifier, because Aerotel told the PT0 during
16 the initial prosecution that it can't be.

17 If we look at the description of the invention, it is
18 clear that the code is provided to the user when they make a
19 prepayment, and that the prepayment and the code are then
20 stored in the memory at the special central office. And we
21 can see this on Figure 1, Block 12, up at the top, you
22 acquire the credit and the number, and the number there is
23 the code.

24 Looking down further on Figure 1, we can see it -- may I
25 approach?

1 THE COURT: Yes.

2 MS. JOST: You can see at Block 14, the user dials
3 for special service. When connected at Block 17, the user
4 must dial the code and the called number. And we'll talk
5 about this a little bit in the context of Step 23(d). But
6 it's very clear that if a valid code is not entered in Step
7 17, a code that can be validated and associated with the
8 prepayment amount in Step, 18, these are bounced out. They
9 get three tries to come back up and try again. If you follow
10 the line from 18 to 24, three times to try on Block 26. If
11 you don't make it, you get bounced out to start again and to
12 reconnect to the special exchange. There's no way that you
13 can make the call without inputting the special code.

14 Now, later on I'm sure Aerotel is going to talk about the
15 method of making a call, and if you have a prepayment amount
16 left over, remaining connected to the special exchange and
17 not having to input the code again. But if we look at that
18 on Figure 1, it's very clear that the user has to remain
19 connected to the special exchange.

20 This would be the normal progression of the call. This
21 code is input once the user is connected. The code is
22 validated. If it's validated, you go ahead and the call is
23 connected. If the user has a balance left over, at Box 34
24 there's a way described in the patent that the user can input
25 a code, not a special code, another code, like a 999 or

1 something, to hang up with the called party, yet remain
2 connected to the special exchange. If that happens and if
3 the user wants to make another call, we can follow this line
4 from Box 35 up to right above 21, and the user can dial
5 another called party. But there's no way described in the
6 patent, and certainly not in Claim 23, that the user can
7 avoid inputting the special code. The reason for that --

8 THE COURT: I understand that part. What is the
9 special code?

10 MS. JOST: The special code is the unique number that
11 is input by the caller each time he dials a special exchange
12 to make a prepaid call so that the prepayment amount to be
13 used to pay for that call can be identified. And I didn't
14 include in the description I just made the disclaimer that
15 Aerotel made. You can see it on my Slide 46 during
16 prosecution that the special code is not a subscriber code,
17 it's not the telephone of the subscriber. It's the number
18 that is issued to the user in exchange for the prepayment
19 amount.

20 I think our position on this is quite clear, and I won't
21 go through all of the slides I have. I did want to touch
22 briefly on Slide 49, which is Aerotel's depiction of the
23 methods described in the Kamil patent to the PT0, and the
24 point there is twofold: One, inputting the unique code is
25 part of the sequential order of making a prepaid call. You

1 have to do it when you dial the special exchange in order to
2 make the prepaid call; otherwise, there's no way of
3 identifying the relevant prepayment amount; and two, as shown
4 on this slide, Aerotel described the special code to the PTO
5 as a unique code. That's not a complex term. It simply
6 means not like any other.

7 THE COURT: All right. I understand your argument.
8 Thank you. Counsel, let's do one more. Let's do inputting
9 the special code, and then we'll take our morning break.

10 MS. CURTIS: Inputting a special code. What
11 Aerotel's, on ISC1, our construction, that other than the
12 special code, the words have their plain meaning. In that
13 this paragraph, contrary to T-Mobile's suggestions, do not
14 require that it have to be input each time, and it only has
15 to be inputted before a call is made. So that doesn't mean
16 every time. It can be input once and there can be multiple
17 calls thereafter. And it doesn't require that all the steps
18 happen in the same order.

19 With respect to one of the things that counsel just
20 referred to, and I'll put it up, is the -- it's Figure 1, and
21 so -- and this looping that goes on in Figure 1.

22 So if the call is terminated by the user, then the user
23 has the option, and right now the user is still in the
24 special exchange, they were on a call, the call is getting
25 timed by using the pay counter. If the call is terminated by

1 the user, as indicated in Block 34, then the user -- and the
2 user can, for instance, hit a special number like 999 or
3 something like that, to terminate it. In the situation where
4 it is the user terminating as opposed to the computer doing
5 it, the user then has the option, as indicated at Block 35,
6 to make another call. If the user wants to do that, then it
7 goes up to the top and it can make another call. And they're
8 at the normal dial tone again, and you get to dial the called
9 party. And then you go through the process again, and this
10 can continue happening so long as anyone wants to continue
11 making calls or -- and/or have sufficient credit to do so.

12 Now, what T-Mobile says is, well, gee, you're already in
13 the special exchange, so this teaches that once you're
14 patched in to the special exchange, you can do this. The
15 first thing we say to that is the teaching is broader than
16 that.

17 What it is suggesting to one skilled in the art, is that
18 there are ways to practice it in invention where you only
19 have to enter the code once, but despite that can make
20 subsequent calls thereafter that don't require you to go back
21 up to the top and go through the whole process.

22 Now, if we go to ISC, and I'll go to ISC4 first because
23 this is the portion of the specification where it
24 contemplates terminating your own call, so not terminated by
25 the system, using, say, a 999, and then you can get another

1 call without having to redial the special exchange.

2 THE COURT: Let me stop you. It seems to me Claim 6
3 has this short circuit, which in every prepaid calling card
4 I've ever seen was triggered by pushing the pound sign, then
5 you don't have to go back and reenter your calling card
6 number or whatever. It simply allows you to make additional
7 calls. But that's missing in Claim 23. What conclusion
8 should I draw from that?

9 MS. CURTIS: Well, actually, it's not, Your Honor,
10 because if you look at Figure 2, let's go first to the
11 patent, Your Honor, and the text specification to Column 5,
12 lines 15 through 22. Column 5, lines 15 through 22 --

13 THE COURT: Hold on. Okay.

14 MS. CURTIS: And when you're in this environment,
15 or -- strike that. 15 through 22 reads: Because the call
16 can be terminated, as indicated in Block 69, either because
17 of no more credit or by the user. So that's the termination
18 by the user or the disconnect by the system. The user
19 terminates by dialing a special code, for example the 999 I
20 referenced a couple of minutes ago, or by closing the hook
21 switch to save ten seconds when there is any more credit
22 left.

23 As indicated at Block 71, the calling party is directed
24 back to the regular dial number. Now, what's happening here,
25 Your Honor, is for the system to be able to do that, if you

1 take a look at Figure 2, and it shows in this situation after
2 the call completes, you're going off hook at 72, at Block 72.
3 It shows you going off hook. If you're off hook, it means
4 you're disconnected from the system. And if the system can
5 then allow you to make another call without reentering it, it
6 means that the system must have associated your special code
7 with an identifying number of the phone, so that when you
8 dial the called party, you'd be routed to the prepaid with a
9 prepayment amount associated with your special code.

10 So this contemplates not only a situation where you're
11 already in the special exchange and you can keep making calls
12 and keep making calls, but it also contemplates -- and that's
13 when you're still on hook, so to speak, and connected.

14 It also contemplates off hook. And here, while they give
15 the example of five seconds, they also talk about in the
16 passage we just looked at on page 5, of ten seconds, the
17 system can set that to be whatever the system wants it to be.
18 It can be for an hour, it can be for two hours, it can be for
19 three hours, it can be 24 hours, it can be indefinitely. And
20 so there is a contemplation here that this can be done
21 outside of the special exchange, and the user can keep making
22 calls. And in this situation, the user has only entered the
23 special code once and never needs to enter it again. So it's
24 inputting the special code. You can do it just once.

25 This is also supported by -- if you turn to ISC, and this

1 notion is described by one of Aerotel's experts, a
2 Mr. Donovan, and if you look at ISC11, he's describing
3 precisely this situation where, from a technical standpoint.
4 -- okay. He testified in response to Mr. Lindvall's
5 questions: "And can you think of a situation where that's
6 not true?" And he says, "Yeah, I can," and what he refers to
7 is just the kind of situation I've just described, where
8 they're using a special code, and that is associated with a
9 particular phone, a phone identifier, for instance, and so
10 that any future use, the platform could use the automatic
11 number and it would link, and then you would be connected.
12 So you don't have to keep going back and you don't have to
13 keep inputting the special code.

14 Another argument that T-Mobile makes is the special code
15 has to be inputted by the user, and that's not quite right,
16 actually, because I can walk into the store of the provider
17 from whom I purchased my card, say -- this time we don't say
18 T-Mobile. We'll say, although it could be T-Mobile, it could
19 be Verizon. So I walk in, and I get my prepaid setup, and
20 that prepaid little package or kit has a phone and it also
21 has with it the associated code that is to be entered into
22 that phone. Well, the individual in the retail store can do
23 that for me. I don't have to do that. So that's just one
24 example of where the user doesn't actually need to do that.

25 And I think there is two more points I wanted to make, one

1 goes back to something you mentioned earlier, and I forgot to
2 mention. But with respect to Claim 6, that's a dependent
3 claim, and it's dependent on Claim 1, Your Honor, so that
4 means that Claim 1 is broad enough to include Claim 6. And
5 Claim 23 is like that in the same regard. So I'd like to
6 make that point.

7 And the second point I'd like to make is that you don't
8 have to perform -- T-Mobile is saying these have to be
9 performed together and therefore the code also has to be
10 entered, because these have to be done together. In fact,
11 that's not the case because they can be done together, or as
12 we see down at 21, it can be done separately. Where that's
13 described, Your Honor, in the specification, is -- okay. The
14 first iteration where they're both done at the same time is
15 Column 3, and beginning at line 26, "When a calling party
16 hears the special dial tone indicating the computer at the
17 exchange is ready for him, he dials the identifying code and
18 the called number he wants as indicated at Block 17." So
19 that's where they're both together in Figure 1.

20 Then it says down at line 39: "The calling parties'
21 pre dialed numbers are transmitted as indicated at Block 21.
22 Of course, the system can be arranged so that the calling
23 party dials the called party responsive to receipt of the
24 regular dial tone." So the regular dial tone is not being
25 received until here. So you can put the called number in

1 here or you can put it down here. So these can be separated.
2 It doesn't mean that this has to be done every time, and it
3 doesn't need to be done along with this.

4 THE COURT: Let me ask you to sit down, but before
5 you do that, I want to make sure I understand. Your view is
6 that these steps in 23 do not have to be done sequentially?

7 MS. CURTIS: At least insofar as -- there are some
8 that do, Your Honor, so it's not across the whole claim. But
9 the claims that have been the focus of T-Mobile, for
10 instance, is that Claim B has to be done -- inputting the
11 special code and the number of the called party has to be
12 done before Claim B.

13 THE COURT: Take a look at 23 for me. It seems to me
14 that Claim B, 23(b), storing the prepayment amount in a
15 memory in a special exchange, could be done prior to Step
16 (a), issuing a valid special code to a calling party when a
17 prepayment amount is deposited to the credit of the calling
18 party.

19 MS. CURTIS: That's absolutely correct, Your Honor,
20 the same way inputting the special code can be done before
21 storing the prepayment amount, because it can happen at the
22 same time.

23 THE COURT: All right. I understand your argument.

24 Ms. Jost, I'll hear from you and then we'll take our
25 break.

1 MS. JOST: Your Honor, I'll respond first to the
2 question that you just asked. We don't contend that there
3 has to be a particular order as between Steps 23(a) and (b),
4 but both of those must proceed to Step 23(d). And there's
5 not generally --

6 THE COURT: Stop for a minute. Isn't the federal
7 circuit teaching on that question that it's either black or
8 it's white? They recognize the situation where a step may be
9 required before another step, but they characterize the step
10 either as sequential or nonsequential, and if you have some
11 that need to go before others, that's a nonsequential
12 characterization, according to the federal circuit teaching.

13 MS. JOST: I don't think that the federal circuit
14 requires that all of the steps must be performed in the
15 stated order if some of the steps must be performed in order,
16 if that's responsive. The general presumption is that the
17 steps of the method claim don't have to be performed in
18 order. But when you look at the clear grammar and logic of
19 the claim and apply common sense, there is a requirement that
20 some steps have to be performed before others, then it's
21 proper to construe the claim as requiring the order.

22 We're not taking only the full order of all the method
23 steps of Claim 23, although I honestly think we probably
24 could, and we have a good argument on that. We're taking on
25 inputting the special code and the number of the called

1 parties at 23(d) has to occur after Steps 23(a) and (b).

2 Now, Aerotel's position is not just that Step D doesn't
3 have to occur after A and B, but that you can take two parts
4 of Step 23(d), inputting the special code and inputting the
5 number of the called party, and you can divorce those two
6 claimed parts temporally, and there's no legal justification
7 for that. They haven't pointed to any precedent that says
8 you can take a step and split it temporally and then perform
9 half that step when you perform the method claim and don't
10 perform the other step. That's just not contemplated by the
11 legal precedent.

12 Looking at Claim 23, at the steps in context, they're
13 clearly written in a logical order. For example, in Step A,
14 the party is issued the special code. Now, a party can't
15 enter a code, input a code in Step 23(d), until the party has
16 the code. So it makes common sense from the logical grammar
17 of the claim that D has to come after A; likewise, the
18 purpose of inputting the code through the special exchange is
19 so it can be checked against the prepayment amount so that
20 logically inputting the special code has to come after Step
21 B.

22 Now, I want to look at Figure 2 that Aerotel's counsel
23 spent some time in as compared to Figure 1. Looking at
24 Figure 2, this is a figure that was described by Aerotel in
25 the specification as reading on the method of the system of

1 making calls using a dedicated public telephone. And as Your
2 Honor pointed out, there is an dependent claim, Claim 6, that
3 stems from Claim 1 that references the method of using the
4 public telephone.

5 There isn't such a claim that comes from Claim 23, and, in
6 fact, Claim 23 Step C requires dialing the special exchange
7 when the user wants to make a telephone call. That step is
8 simply not depicted in Figure 2. In Figure 2, we start at
9 the top where the user purchases the prepaid ticket in Box
10 51, then in 52 the user goes off hook at the public
11 telephone. There's no dialing for special service in Figure
12 2 because in the dedicated public telephone scenario, when
13 you pick up, you're already connected to the public
14 telephone.

15 So if we're going the take Aerotel's argument to its
16 logical conclusion, yes, if you were using the system that
17 might be described in Step 6 -- excuse me, in Claim 6, and
18 you stood forever at the dedicated public telephone so that
19 nobody's code would interrupt your succession so there
20 wouldn't be confusion over the prepayment amount being used,
21 you might get to make more calls without having to enter your
22 code.

23 That defies common sense and is inconsistent with the
24 steps of Claim 23 as depicted in Figure 1, which requires
25 that the code be entered each time the party dials the

1 special exchange to make the phone call.

2 THE COURT: The semantics in that question -- I want
3 to make sure I understand your argument. Is it your
4 contention that I go through Step A, B, C, and D in this
5 example, and then I entered my number -- all of this assumes
6 I have proper credit. I complete that call. I indicate to
7 the system that I've completed that call, and the other party
8 hangs up or I enter some code. You're saying that I need to
9 go back and reenter my unique code prior to making the next
10 call?

11 MS. JOST: May I show you on the figure?

12 THE COURT: Yes.

13 MS. JOST: The answer is yes and no. If you, in Box
14 34, terminate the call without disconnecting the special
15 exchange, so by punching in 999, you remain connected to the
16 special exchange. Then if you have a remaining prepayment
17 amount, you may make another call. And if you follow the
18 lines in Box 35 back up to right above 21, you don't have to
19 enter your code again.

20 THE COURT: What you're then trying to communicate
21 when you say, "inputs the special code to the special
22 exchange each time he or she dials the special exchange to
23 make a prepaid call."

24 MS. JOST: Or series of calls.

25 THE COURT: All right. Then I understand that

1 argument.

2 MS. JOST: Yes. The other scenario is that if you
3 hang up without remaining connected to the special exchange,
4 then the call is terminated and you have to go all the way
5 back up and dial the special exchange again in order to enter
6 that sequence.

7 THE COURT: I understand. Counsel, go ahead and wrap
8 up, and we'll take our break.

9 MS. JOST: Your Honor, we point in our briefing to
10 the many instances in the specification of the prosecution
11 history where the user describes the claim as we've described
12 it. I did want to look real quickly at Claim 1 just to be
13 sure this argument is clear.

14 In Claim 1, which is up on the screen, we do have the
15 requirement that the special code be entered and that the
16 number of the called party be input. But in Claim 1, they
17 appear in two separate steps, Steps D and E of Claim 1.
18 Clearly the inventor understood that if you wanted to split
19 those steps out of the single step of the method claim, you
20 could do so. In Claim 23, they're together in Step 23(d),
21 and there's no precedent for divorcing them.

22 And then simply if we look at the construction that
23 Aerotel submitted in prior litigation, there in the materials
24 I've included a couple slides, I don't even know if we need
25 to look at them, but Aerotel's prior constructions of claimed

1 Step 23(d) is the authorization code and the destination
2 telephone number are input. That's the NACT case, and in the
3 RSL case, the exact same construction.

4 And then Aerotel's experts in other cases also testified
5 that there must be an order of the steps. Mr. Donovan
6 testified, I believe this is in the -- I think it's in the
7 Verizon case, this is Exhibit Y -- that Steps 23(a) and (b)
8 must occur before Step 23(d). I split this onto two sides
9 just so it's more legible. On Slide 64, you can see A and B
10 have to occur first, then C has to occur, and then
11 inputting -- C, by the way, is dialing said special
12 exchange -- then D has to occur after Step C occurs. So
13 Aerotel has conceded in prior litigation that this order has
14 to be applied in order for calls to go through.

15 THE COURT: All right. Counsel, we'll take our
16 morning break at this time. When we come back, we're going
17 to take up the connecting term, which you've given yourselves
18 five minutes per side on. I'm not sure it deserves that
19 long, but you can use your time to contemplate that question
20 while we take our break. We'll be gone for probably in the
21 order of 15 minutes and be back out about eleven o'clock.
22 We'll be in recess.

23 (A RECESS WAS TAKEN.)

24 THE COURT: Counsel, who is going to do connecting?

25 MR. BURLING: I will, Your Honor.

1 THE COURT: All right.

2 MR. BURLING: This should be very brief.

3 THE COURT: I'm going to hold you to that.

4 MR. BURLING: Directing the court's attention to
5 Slide C1, here we set forth Aerotel's construction of
6 "connecting." And there's probably a little additional
7 baggage we don't really need. Really, what we're saying is
8 the term connecting itself should be construed according to
9 its plain meaning, and to us that would be causing a call to
10 be completed. And there's ample -- I should say it's
11 interesting, and Judge Holwell noted this during our hearing
12 in New York. He said aren't we really just causing the call
13 to be completed, and is the extra baggage here really
14 necessary, and we'd agree with that. That's defendant's
15 position. So rather than reading you Slide C2 through C8,
16 which point to the support and the specification and the
17 prosecution history for our construction, I will jump to
18 Slide C9, which sets forth T-Mobile's construction.

19 And T-Mobile says connecting the calling party to the
20 called party, et cetera, means completing a call only if the
21 special code input by the calling party is verified as
22 genuine at the time the call or sequence of consecutive calls
23 is initiated.

24 And our response to that, Your Honor, would be that the
25 patent -- Ms. Curtis touched upon this -- the patent

1 discloses an embodiment in which the special code need not be
2 entered for every call. And Ms. Curtis was directing the
3 court to Figure 2. And if you -- if I could direct Your
4 Honor's attention to Figure 2, it shows the calling party
5 going off, paying for five seconds, and then going back up to
6 Block 63 to make a call.

7 And as Your Honor can see, this happens after the
8 validation step, Step 56. So for the same reason that the
9 special code need not be inputted every time a call or a
10 series of calls is initiated, the special code need not be
11 verified every time a call or series of calls is initiated.

12 And counsel responded to this by saying, well, Figure 2 is
13 not a disclosure of Claim 23 because it doesn't include the
14 dialing step. And our response to that, Your Honor, would
15 be: Claim 23 is not limited to what's disclosed in Figure 2.
16 What we feel is important here is that the patent discloses
17 an embodiment where the code is not verified every time a
18 call or series of calls is initiated. And support for this
19 and the specifications, as Ms. Curtis pointed out as well, is
20 at Column 5, beginning about line 15, which describes the
21 Figure 2 that I just described.

22 THE COURT: Figure 2, according to Column 4, line 44,
23 says that it is a flowchart showing the use of a dedicated
24 public telephone. What use should the court make of the term
25 "dedicated public telephone"?

1 MR. BURLING: Well, it's a disclosure of one
2 embodiment, but nothing says that Claim 23 is limited. Claim
3 23 could cover a dedicated phone or another phone, a
4 dedicated public telephone or another phone. It's just one
5 disclosure. And a person skilled in the art of reading this
6 could pick and choose and say, well, here's a disclosure in
7 the patent where not only is the special code not being
8 inputted every time, it's not been verified every time, and
9 so there's no basis for reading this limitation, which
10 T-Mobile does, into the end of their construction. Is that
11 responsive, Your Honor?

12 THE COURT: If anything, probably more than I need.
13 All right. Thank you, Counsel.

14 MR. BURLING: Thank you.

15 MS. JOST: Your Honor, if I could respond first to
16 your last point.

17 Figure 2, if it's claimed at all, this process of using a
18 dedicated public telephone, is relevant only to the method
19 Claim 6, which depends from Claim 1 and describes the method
20 of using a dedicated public telephone, or the system Claim
21 14, which depends from Claim 9, and contemplates using a
22 dedicated public telephone. Claim 23 is limited to what is
23 claimed in Claim 23, and Claim 23 requires that the special
24 exchange be dialed each time a call is made. So we're not
25 looking at Figure 2, we have to look at Figure 1, and that

1 clearly requires that the special code be verified each time
2 a call is made.

3 Now, I was thinking during our break about the argument
4 that counsel made looking at Figure 2, which we believe is
5 incorrect, but about how you could make a telephone call
6 using any phone. You make a call using the code and you
7 input your code once, and so long as you are making calls
8 using that phone, you never have to input or have the code
9 verified again.

10 So if you took that to its conclusion -- and I don't mean
11 the logical conclusion because I think it makes no sense at
12 all -- say you use your friend's phone to make a prepaid
13 call. You would then be paying forever for any prepaid call
14 that was made from that phone. Same thing on a public
15 telephone. If you entered your code once and if it was only
16 validated once, and if it never again -- if those steps never
17 again had to be performed, any subsequent call made using
18 that phone would be charged to your account. It simply makes
19 no sense, and it certainly doesn't comply with the explicit
20 language of Claim 23.

21 Now, Aerotel's argument as to Claim 23(e) is kind of
22 similar to the argument that it made with respect to Step
23 23(d). Again, Aerotel's proposed construction would ask the
24 court to break up the parts of that step and to temporarily
25 split them, and, in fact, to require that one be performed

1 each time a call is made and one not.

2 If we look closely at the language of Step 23(e), it has
3 two parts: The connection part, and I don't think we have a
4 dispute about what connecting means, but connecting the call
5 to the calling party only if, one, the special code inputted
6 by the calling party is a valid special code, and in
7 addition, only if the current initial prepayment amount in
8 the memory exceeds the minimum cost of a call to the inputted
9 number.

10 Now, there can't be any dispute that the second part of
11 Step 23(e) has to be performed each time the call is made,
12 because you can't know how much the call is going to cost
13 until you dial the number of the calling party, and that's a
14 step you have to make each time you make a call. You can't
15 say that half of Step 23(e) must be performed but half of it
16 doesn't.

17 As we argued in connection with Claim 23(e), there is
18 simply no legal support for that analysis. And I won't
19 trouble you with going through all of the intrinsic record
20 again. I'll flip through quickly to see if there's anything
21 we missed. But Aerotel has repeatedly referred to this step
22 and required that both the code number be verified and the
23 number of the called party -- excuse me -- and the minimum
24 cost of the call be calculated.

25 Our Slide 75, and again we look first to the intrinsic

1 record, but I believe the intrinsic record is quite clear, we
2 don't have to look at the intrinsic record, but as a matter
3 of fact, Aerotel has made conflicting representations in
4 prior litigation. In Exhibit 74, this is the text of the
5 claimed construction report, after the call is connected with
6 the special exchange, after the user has dialed Step 23(c),
7 then Step 23(d), the calling card's authorization code is
8 input, and at 23(d), the authorization code is checked to
9 ensure that it's valid.

10 If we look at the claimed construction report in the NACT
11 case down at the bottom there, the construction is what we're
12 looking for. The call is connected in that particular case,
13 the special switch is verified; one, the code is valid, and
14 two, the prepayment amount associated with the authorization
15 code is sufficient to cover the minimum cost of the call.
16 This is consistent with the argument that Aerotel made in the
17 RSL case, and it's consistent with the testimony of its prior
18 experts. There simply is no foundation in the language of
19 Claim 23 or anywhere in the intrinsic record for divorcing
20 Step 23(e) from the context of the claim and for splitting it
21 and requiring that only part of it be performed.

22 THE COURT: Mr. Burling, I have one more question for
23 you.

24 MR. BURLING: Sure.

25 THE COURT: Column 4, line 44, says Figure 2 is the

1 flowchart showing the use of a dedicated public telephone.
2 That would appear to relate to Claim 6, and Claim 6 appears
3 to be a dependent claim to Claim 1. Do you agree with that
4 construction?

5 MR. BURLING: Beg your pardon, Your Honor. You're
6 asking if?

7 THE COURT: If Claim 6 is a dependent claim to Claim
8 1.

9 MR. BURLING: Yes.

10 THE COURT: Then is it your position that I can
11 import from Claim 1 usage into Claim 23?

12 MR. BURLING: The two claims can have similar
13 elements, yes, Your Honor.

14 THE COURT: Well, that's a different -- it's not
15 similar elements. I mean, Figure 1 or Figure 2, and in
16 Figure 2 we're talking about a dedicated public telephone,
17 and it has a step in it that is, at least, different from
18 what is found in Figure 1. I'm trying to determine if Claim
19 6 is a dependent claim of Claim 1. Can I take something out
20 of Claim 1 and input it into Claim 23, which is the recontact
21 to the special exchange without disconnecting and
22 re-entering?

23 MR. BURLING: Yes, Your Honor, you can. If the
24 disclosure is there, you can take something out of Claim 6,
25 and it could be in Claim 23 as well. Again, if the

1 disclosure is there anywhere in the specification, a person
2 skilled in the art of reading it would say, aha, here's an
3 embodiment where a code need not be verified every time. And
4 so how could I limit the connecting step when we're really
5 talking about the verification step here. How could I then
6 limit the verification step and say it has to be done every
7 time the call or series of calls is made? It runs contrary
8 to what they're saying.

9 THE COURT: Then I understand your argument. Thank
10 you.

11 MS. JOST: Your Honor, may I respond very quickly to
12 that?

13 THE COURT: No.

14 All right. We're going to move on to prepayment amount,
15 initial prepayment amount, current initial prepayment amount,
16 and I'm not sure who is arguing those terms.

17 MR. BURLING: I am, Your Honor.

18 THE COURT: All right. Mr. Burling, you sprung to
19 life on us here.

20 MR. BURLING: Your Honor, Aerotel's construction is
21 set forth on Slide PA1: Areotel's construction prepayment
22 amount, and using this step as a monetary value associated
23 with the special code.

24 Throughout the specification, as we set forth in our brief
25 and in the subsequent slides, and, again, I won't read to

1 you, the prepayment amount is associated with the special
2 code. They're both stored in the memory when a call is made,
3 the special exchange looks at them and says okay, can this
4 caller make this call. And that's set forth, for example, in
5 the patent Column 4, lines 50 through 55, and reads, "He then
6 dials in the secret code number as indicated at Block 54."
7 The system checks to see if it's a valid ticket number. If
8 it does, et cetera, he's notified of the amount of credit
9 available in his code. So the two are linked, and the
10 prepayment amount is just a monetary value that's associated
11 with the special code that enables the system to work.

12 If we look at defendant's construction, which is on Slide
13 PA7, defendant adds a number of limitations here that simply
14 aren't found in the claimed -- well, first of all, the
15 defendant's prepayment amount, initial prepayment amount, and
16 current prepayment amount mean the same thing. If I may,
17 Your Honor, I'll address that after I address a couple other
18 points the defendants made.

19 Defendant says the prepayment amount, they all mean the
20 monetary amount deposited by the user in exchange for a
21 special code, the telephone number of the special exchange,
22 and a credit against the cost of future telephone calls equal
23 to the monetary amount.

24 There's nothing in the claim that says the user acquires a
25 telephone number in exchange for a prepayment amount. And

1 nor is there anything that requires that the amount of money
2 spent by the user equals the prepayment amount. Rather, the
3 claim says issuing a valid special code to a calling party
4 when a prepayment amount is deposited to the credit of said
5 calling party. It doesn't say that the user deposits it. It
6 just says that it is deposited. And it doesn't say that the
7 amount paid is deposited, it's rather it's the prepayment
8 amount is deposited. And it's our position, Your Honor, that
9 those two terms -- excuse me -- that prepayment amount need
10 not equal the amount of money the customer might actually
11 pay. There's just no basis for that in the claim.

12 Your Honor, if I could direct your attention to the
13 specification Column 3, lines 9 through 14, here we have the
14 discussion of one embodiment. It's just a general
15 description. And it reads, "Alternatively, the credit
16 amount, the telephone numbers, and identifying code can be
17 purchased at sales points such as airports, hotels,
18 rent-a-car stations, and the like. The amount paid is
19 credited to the acquirer for use to make calls."

20 Here the patent is disclosing an intermediary; for
21 example, between the prepaid telephone service provider and
22 the user of the prepaid service. There may be, for example,
23 like the patent says, a rent-a-car station that sells these,
24 or a telephone store that sells these, for example. That
25 speaks to the fact that what's credited in the account has

1 nothing to do with what the user necessarily spends. One,
2 whoever is running the special exchange, for example, has no
3 idea what the user is going to spend. There's no connect
4 there between what the user actually spends for the card and
5 the prepayment amount.

6 So again, Your Honor, the defendant is trying to read into
7 the claim what happens after a prepayment amount is
8 deposited. Yes, the user may get a special code, but it's
9 not necessarily in exchange for the prepayment amount itself.
10 It could be in exchange for whatever the user hands over to
11 that store, the cash that's actually spent.

12 I'm looking through my slides to see if I need to go
13 through them, Your Honor. Your Honor, one example of how
14 there might be a different value from what the customer
15 actually spends and what the prepayment amount that is
16 deposited equals is, for example, a promotional discount. A
17 user could spend four dollars to get five dollars' worth of
18 talking time. Again, that's contemplated in the passage that
19 I read about the intermediary selling these cards.

20 Moving ahead to the terms current prepayment amount and
21 initial prepayment amount. Aerotel's construction is set
22 forth on Slide CIPA1, and we say these terms -- the terms
23 current initial prepayment amount and initial prepayment
24 amount are the amount of the prepayment remaining at the time
25 the call is made.

1 And I'll direct the court's attention to Slide CIPA2,
2 which lists Claim 23, and what the claim shows and what the
3 patent discloses and teaches is that there is a changing
4 value amount that's associated with the special code as the
5 call -- as the call is made or as calls are made
6 sequentially, and that can be seen, for example, in the
7 connecting step, in the monitoring step, the claim is
8 monitoring the running cost of the call; disconnecting, it's
9 disconnected when the running cost exceeds whatever the
10 current prepayment amount is. And most importantly, Your
11 Honor, the deducting step. The claim discloses changing --
12 the changing monetary value, Your Honor, that happens as a
13 call is made or a series of calls are made.

14 So looking at defendant's construction -- and by the way,
15 Your Honor, we set off the portions of the specification in
16 our briefing that support this. I mean, there's a number of
17 examples that show a changing monetary value associated with
18 the special code; for example, Column 4, lines 9 through 11,
19 when the credit equals the used time rate, the call is
20 automatically ended by computer, and it shows the credit
21 amount is going down throughout the use of the invention of
22 the Claim 23.

23 THE COURT: When you use the phrase prepayment amount
24 in 23(a), your proposed construction is that the prepayment
25 amount as used in this step is a monetary value associated

1 with the special code. It seems to me that that's a
2 universal definition; that in order for it to be the
3 prepayment amount used in the context of is deposited to the
4 credit of said calling party, then it has a fixed point in
5 time associated with this; whereas, your use of current
6 initial prepayment amount in E, G, and H, as you've just
7 said, seems to have a temporal dimension to it. It strikes
8 me that that renders your 23(a) definition difficult in that
9 it lacks a distinction one way or another as to the temporal
10 scope of 23(a).

11 MR. BURLING: Yes. When an account is set up, a
12 special code is determined by, for example, a prepaid service
13 provider, and they set up an account and say we have this
14 special code, we're going to associate it with this
15 prepayment amount, which is the amount associated with the
16 code. That is, when that happens is when the account is set
17 up. The prepayment amount need not be, Your Honor, what the
18 customer actually pays, as T-Mobile has contended.

19 THE COURT: All right.

20 MR. BURLING: It's the amount deposited if the claim
21 says it 's the amount deposited to credits, so if this
22 depositing stuff happens at a specific point in time, yes, we
23 agree with that, Your Honor.

24 THE COURT: All right. Thank you.

25 MS. JOST: The term "prepayment amount" occurs in

1 both Claims 1 and 23, but in Claim 23 it was added by the
2 1987 amendment. Aerotel added these descriptors "initial"
3 and "current initial." Those terms don't appear in any other
4 claim term, they're not in Claim 1, and they're not used
5 anywhere in the specification. But we still, according to
6 the federal circuit's direction and *Phillips* and elsewhere,
7 have to start with the language of the claim and the clear
8 import of the specification in order to figure out what those
9 terms mean. The construction that we've proposed comports
10 with that requirement.

11 Aerotel is asking the court to divorce the term
12 "prepayment amount" from the context of the specification,
13 and essentially to make up two constructions of initial and
14 current initial prepayment amount so that Aerotel can capture
15 now in litigation what it wanted to claim but didn't claim.

16 It helps first to look at the specification where we learn
17 that the customer acquires the special code, the credit
18 amount, and the telephone number of the special exchange
19 offices by either a cash credit or prepayment. There is a
20 clear and unambiguous linking specification between the
21 payment of the amount of money by the customer and the
22 receipt of these three things. And at Column 3, lines 9
23 through 12, you can see it on the blowup here, the
24 specification makes it very clear that the customer is
25 purchasing these three things.

1 Now, Aerotel suggests that the prepayment amount doesn't
2 need to be the dollar amount that is paid by the customer or
3 that it can be some variable amount. We have the same
4 section of the specification, the patent teaches that, in
5 lines 12 through 13, that the amount paid, not some other
6 amount, is credited to the acquirer for use against future
7 calls. The credited amount -- again, that's the amount
8 paid -- is stored in the memory of the special central
9 office, along with the special code. So we know that it is
10 the prepayment amount which is used later to process
11 telephone calls. And it's clear, and I'm pointing out
12 particularly to this section of the specification that there
13 are ample references throughout the prosecution history that
14 the prepaid customer and not somebody else is depositing the
15 prepaid amount.

16 I think it helps to look at Claims 1 and 23 side by side
17 because, again, the federal circuit has instructed that a
18 claimed term must be construed or is presumed to be used
19 consistently across different claim terms.

20 Looking at Claim 1, there is a requirement that the
21 prepayment amount is the amount paid by the customer. In 1A,
22 the customer is obtaining the special code by depositing a
23 prepayment amount. In Step 1(b), B prepayment amount, and I
24 underline B because just applying the general claim
25 construction principle of antecedent basis, the first time

1 they reference claim term A and then when you reference back
2 so that it's clear that you're referring back to the term
3 used previously, you use the word "the." So in Step B, the
4 prepayment amount is the same prepayment amount referenced in
5 1(a), and the same thing in Steps 1(h), 1(f), and 1(i). The
6 antecedent basis for the prepayment amount is the amount that
7 is deposited in Step 1(a).

8 Now, if we turn to Claim 23 on the other side of the
9 screen, we see the same story. In Step A, a prepayment
10 amount is deposited to the credit of the calling party, and
11 then in Step B, the prepayment amount is stored in this
12 memory. That's the same amount that is deposited in Step A.

13 When we get down to Steps E, G, and H, we have these kind
14 of confusing adjectives that Aerotel added in, yet they're
15 still using "the" to describe this prepayment amount. Simply
16 applying the very basic principle of claimed construction,
17 the antecedent basis for those terms has to be a prepayment
18 amount, the amount deposited by the customer in Step A.

19 Now, again, the specification doesn't tell us how we're
20 supposed to interpret current initial or initial. So the
21 amount of money deposited by the user has to be the
22 prepayment amount.

23 Now I want to look back at the prosecution history of
24 Claim 1, because if you look at -- this is a mark up, this is
25 the amendment that Aerotel filed. The additions are

1 underlined and the deletions are bracketed here. You can see
2 if you look at how Claim 1 appears when it was originally
3 filed that Aerotel described in many cases the credit rather
4 than the prepayment amount. That's clear in Step F where
5 Aerotel changed credit to prepayment amount less any
6 deductions for previous calls, and it's clear down in Step
7 1(i) where Aerotel changed credit to mean the prepayment
8 amount.

9 Now, it's clear that if Aerotel wanted to claim a variable
10 changing money amount, Aerotel knew how to do it. And if you
11 look at the language of Claim 1 as amended, Aerotel is much
12 more clear. Aerotel simply didn't do that in Claim 23, and
13 Aerotel is stuck with what it claimed.

14 And I'm not going to drag you through all of the places in
15 the prosecution history where Aerotel repeated the prepayment
16 amount is the amount deposited by the customer. They said it
17 many, many times in their own briefing, and they reiterated
18 that the prepayment amount is made by the customer, and in
19 return the customer gets the special code, the credit amount,
20 and the telephone number of the special exchange. Aerotel
21 made these same arguments in prior litigation.

22 And, again, we're not asking the court to import anything
23 into the claim. We're simply following the very basic rules
24 of claimed construction. What you claimed is what you get,
25 and when we need to figure out what that claim means, the

1 first and foremost places we look are the explicit language
2 of the claim, the intrinsic record, including the text of the
3 overall invention, and the specification and the prosecution
4 history.

5 THE COURT: Counsel, the problem with your argument
6 is that you've ask me to basically ignore the language that's
7 found in 23. If I look at G, it says, "When the running cost
8 of the call exceeds the current initial prepayment amount,
9 whichever occurs first."

10 If I understand your argument, basically, if I deposit
11 \$25, they're not having a sale, so I'm not getting 15 minutes
12 for \$25 or whatever, or \$50 worth of minutes for \$25, and it
13 stays that amount as opposed to declines with use, and that's
14 literally what your language says.

15 MS. JOST: And I think that's what Aerotel is left
16 with, because Aerotel never defined what initial and current
17 initial means, and if we look at the context of the patent in
18 the intrinsic record, it's clear the prepayment amount is a
19 static amount. Now, that doesn't render the claim
20 meaningless, because if you, according to the method
21 described to Claim 23, made a call in which you used the
22 entire prepayment amount, that would be infringing. But
23 again, we're not here to make Aerotel's infringement
24 arguments. They're trying to import, essentially, their
25 infringement arguments into the claims construction. But

1 we're wedded to the language of the claim, and if Aerotel
2 structured Claim 23 in a manner that doesn't capture
3 everything they wanted to capture, they're stuck with it.
4 The court is not permitted in the claim construction phase to
5 broaden the meaning of the claimed term beyond what was
6 claimed.

7 THE COURT: But the court is also instructed to make
8 use of all the claimed terms in order to understand the
9 particular specification or claim, and it seems to me what
10 you're asking me to do is to seize on A and ignore G,
11 particularly this running cost of the call would just be read
12 out of the language if I adopt your definition.

13 MS. JOST: I don't think it would be read out. For
14 example, if we look at Claim 1, I have Claims 1 and 23 side
15 by side on the screen so it's a little bit easier. For
16 example, in Claim 1I that reads -- actually, look at H.
17 Monitoring the prepayment amount less deductions for the
18 running cost of the call, and then I, disconnecting said call
19 when the prepayment amount has been spent.

20 So clearly, at least in Claim 1, the patentee intended
21 that the prepayment amount is going to be used to process
22 these calls. We get into an invalidity issue if we try and
23 make up something for current initial and initial. Because
24 there's no language in the specification that provides a
25 definition for those terms, if they're not encompassed by the

1 specification, then they're new matter and they're
2 prohibited.

3 So I think we're between a rock and a hard place. We have
4 to construe the claim in the manner that has a fixed
5 prepayment amount, or if current initial prepayment amount
6 and initial prepayment amount aren't described in the patent,
7 they're new matter and the claim is invalid.

8 THE COURT: All right. Thank you. I believe our
9 next claim term is "monitoring" to which you've devoted ten
10 minutes per side. Mr. Morgan?

11 MR. MORGAN: Thank you, Your Honor. Your Honor, I
12 have up on the screen Aerotel's construction. Aerotel's
13 construction comes directly out of the patent. You'll note
14 what it talks about is basically the two ways of monitoring.
15 I don't really think there's dispute about what running costs
16 mean, Your Honor, but there's two ways of monitoring
17 described in the patent. Both involve time, both involve
18 money. Monitoring time, which is converted to money, or
19 money which is converted to time, and I'll get into that
20 right now.

21 The specification describes one way of doing it. It's
22 kind of like a taxi meter, Your Honor, in a sense what one
23 does is one looks at how much money is in the account when
24 the call is to be made, converts that amount of money to talk
25 time. In other words, you know this call is going from

1 Seattle to Los Angeles, and that costs 20 cents a minute, and
2 you've got \$5, or let's say -- let's make it easy. A
3 dollars's worth of money, you've got five minutes to talk.

4 So what the patent discloses is converting the amount of
5 money in the account to the amount of talk time. And the
6 user actually can be told you've got five minutes.

7 Then the patent describes that what one does is use what's
8 called a peg counter. A peg counter is like a taxi meter,
9 Your Honor. Telephone calls tend to be billed in increments
10 of one minute, half minute, a second, whatever it is the
11 telephone company wants to have. Most telephone companies
12 actually do it in terms of one minute. A call of 59 seconds
13 is one amount. A call of 63 seconds is different. A call of
14 69 seconds is really the same cost of a call of 62 seconds.
15 You've gone into the second minute. Kind of like a taxi
16 meter, which runs by tenths of a mile. You get a tenth of a
17 mile, money goes up; you go another tenth of a mile, it goes
18 up again.

19 What the patent describes is converting money to time,
20 say, like, five minutes. A call goes through. The peg
21 counter is counting the time. This is in Figure 1. The peg
22 counter is counting the time, and that time, every, say, 30
23 seconds or every minute, sends a signal. That is then
24 compared to the time that the conversation is continued, the
25 call is continued.

1 So if my call is going on for a minute, the peg counter
2 counts as a minute, has a comparator. The comparator says
3 you have five minutes, you've used up one, the call can
4 continue. That goes on until the peg counter counts to five
5 minutes, at which point it's time to shut the call down.
6 You've monitored the call in terms of its cost by using time.
7 You've converted money into time, and then you'll convert
8 back again when you deduct the money in the account. That's
9 the first way to describe what's described.

10 The second is actually, again, timing, timing the call,
11 and as the call progresses, converting the time to money and
12 comparing the money to what's in the account. Either way,
13 either way is a time. Either way time is measured. Either
14 way, time is a function of money or vice versa. That's
15 what's described in Figure 1 and Figure 2.

16 Incidentally, Your Honor asked about can you import Figure
17 2 from Claim 1. I don't think you can import. What the
18 point is, is that Claim 1, by its description, is
19 sufficiently drawn to include the dedicated phone, for
20 example, in Claim 6. That's what an independent claim means.
21 Claim 23 is like Claim 1 in that regard. You don't import
22 the dedicated phone from Claim 1, but you do recognize that
23 both claims are sufficiently broad, and that's what
24 independent and broad claims are meant to do. The scope of
25 the claim is meant to be able to cover various aspects and

1 embodiments in the patent, and so long as the independent
2 claim is not limited in some way that would exclude those
3 embodiments, then it does include it.

4 But having looked now at the two ways in which the patent
5 itself describes how you monitor, that then is what we
6 propose as being the construction and continuous or
7 intermittent, and I'll tell you why that is, Your Honor: I
8 think to avoid confusion, primarily for the jury.

9 The peg counter, like I say, is like a taxi meter. The
10 taxi meter runs up time in increments. It is, however,
11 continuously monitoring the time. So, in fact, the
12 description of the peg counter embodiment does use the word
13 can continuously monitor or continuously compare the times.
14 But the word continuously, just to avoid some confusion, I
15 don't want people to think that continuously means the
16 word -- there are no increments. Everything is measured in
17 increments.

18 So we then turn to what it is that T-Mobile wants:
19 Accumulate the cost of the call. What they want to do is
20 they continuously calculated the accumulated cost of the
21 call. Now, ironically, calculating the accumulated cost of
22 the call, interestingly enough, is what Figure 2 does, the
23 dedicated embodiment. Now, we've just spent two and a half
24 hours or more listening to T-Mobile try to tell us that you
25 can't use anything out of Figure 2 in these claims, and yet

1 when we come to T-Mobile's construction, that's exactly what
2 they want to do. They want to restrict this claim
3 construction to exclude the Figure 1 operation, the peg
4 counter operation.

5 I think that just makes it clear what's going on here.
6 We're not really trying to construe these claims to cover the
7 invention. We're trying to construe these claims to not
8 cover T-Mobile. Now, whether or not this would succeed, I
9 don't think it would, but that's a definition for
10 infringement. But in any event, there's two ways to describe
11 monitoring in the patent. We have put those in both ways
12 involve time, both ways involve money. We have put those
13 into our claimed construction. We don't think it's
14 appropriate to try to limit the construction to exclude the
15 very embodiment that they keep saying these claims should
16 relate to. Thank you.

17 MS. JOST: The parties obviously dispute whether the
18 running cost has to be measured as a monetary amount or
19 whether it can be measured as time. Now, we don't argue that
20 there can't be a time component involved in the manner in
21 which the running cost is measured. But the claimed term is
22 clear, and it's clear taken in the context of the other
23 provisions of Claim 23, that the running cost must be
24 measured as a dollar amount. There's no dispute that in Step
25 23(g) the running cost of the call has to be compared with

1 the initial prepayment amount, which is also a dollar amount.
2 And then in 23H, the running cost of the call must be
3 deducted from the initial prepayment amount. Again, a dollar
4 amount.

5 So although the specification doesn't tell us exactly how
6 it's to be measured, it is very clear that it has to be a
7 dollar amount, and it has to be monitored continuously
8 because Step 23(g) requires that the call be disconnected
9 when the running cost of the call exceeds the current initial
10 prepayment amount.

11 Our construction is simple, and the reason Aerotel objects
12 to it is because they want to import into their claimed
13 construction a doctrine of equivalence argument that they
14 want to make in the infringement phase. They want to be able
15 to argue that measuring time is the equivalent of measuring
16 money. But that's not what the claim says, and that's not --
17 we're not here to decide Aerotel's infringement argument.
18 The construction proposed by T-Mobile again is supported by
19 the specification and it's consistent with the construction
20 of the claim that Aerotel made in prior litigation.

21 I wanted to have a chance to show Your Honor the animation
22 that Aerotel showed to the PT0. So on our -- I think this is
23 our Slide 92. This is the animation that Aerotel used to
24 demonstrate to the PT0 how their system worked. And you can
25 see, if you look in the special exchange box, the call is

1 connected, the prepayment amount is \$5, which corresponds to
2 the \$5 prepayment amount up on the prepaid card that's shown
3 at the top. The call has been connected, and as of the very
4 beginning of the call, the running cost is zero. It hasn't
5 started yet. So as we progress through the animation, you
6 can see the running cost of the call, the dial is turning,
7 it's measuring how much of that \$5 has been consumed, the
8 running cost goes up to three, and then the animation
9 continues, and when it gets up to \$5, the call is
10 disconnected. This is very clearly showing that the running
11 cost is calculated throughout the duration of the call, and
12 it is measured in terms of the monetary amount.

13 Now, again, I won't go through all the references in the
14 prior art, the references in the prosecution and
15 re-examination history that are in our briefing, but it's
16 very clear from the brief review that each time the cost of
17 the call is discussed, it says it's a monetary amount that's
18 measured against and then deducted from the prepayment
19 amount. Both are dollar values, and the running cost is
20 continuously measured.

21 So again, the intrinsic record is clear and there's no
22 need to resort to the extrinsic record, but we cite to our
23 brief, and I have a couple of slides showing how the
24 construction proposed by T-Mobile is fully consistent with
25 Aerotel's prior constructions.

1 And I'll jump to Aerotel's claimed construction in the
2 NACT case. This is Exhibit P at page 7, our Slide 497.
3 Monitoring the running cost of the call in accordance with
4 its duration is construed as the call was monitored to
5 determine whether the ongoing cost of the call would exceed
6 the prepayment amount that was available when the call was
7 initiated.

8 If we look at the construction that was used in the RSL
9 case, measuring the accumulated cost of the call is a
10 function of duration. It's nearly verbatim, the construction
11 proposed by T-Mobile in this case. And the testimony of
12 Aerotel's expert witnesses is consistent. The running cost
13 of the call, again, a dollar amount is determined as the call
14 progresses. It is how much a carrier is to be paid for
15 carrying a call. And Mr. Chandler explicitly agreed, it was
16 clear there, and he said later on, the running cost of the
17 call in Step G of Claim 23, would that be a monetary amount,
18 yes. In Step H, where the running cost of the call is
19 deducted from the initial prepayment amount, is that a
20 monetary amount? This is on Slide 100, Exhibit CC. Yes,
21 it's a prepayment amount.

22 So, again, the construction that we propose is simple,
23 it's consistent with the claim, it's supported by the
24 intrinsic record, and it doesn't have the attempt by Aerotel
25 to import its doctrine of equivalence and measured argument.

1 THE COURT: Counsel, what do you make of the Column
2 4, line 3, where it describes Block 28 as the normal time and
3 distance computing circuit, and it's shown as a pay counter.
4 It's putting the service to provide information for timing
5 the call against the available credit.

6 MS. JOST: We don't dispute that time is relevant to
7 the computation of the running cost. And I think the lines
8 that Your Honor referenced in Column 4 and the reference on
9 Figure 1 provides some of the technical aspects of how the
10 running costs might be measured, but the claim language of
11 Claim 23 and, indeed, the other claims in the patent, are
12 very clear that however you get there, the running cost must
13 be determined as a monetary amount. And Aerotel's
14 construction ignores that fact, and is really an effort to be
15 able to argue when they get to the infringement phase, well,
16 you don't have to measure it as money, you can measure it in
17 terms of time, and maybe when you get to the end, you do some
18 sort of tally to convert it back to money. That's reaching
19 beyond what the claim language says, and it's certainly
20 reaching beyond what Aerotel represented to the PT0 and in
21 prior litigation. The running cost is a dollar amount, and
22 however you get there, it has to be measured as such.

23 THE COURT: All right. Thank you, Counsel. Counsel,
24 I believe we've worked our way up to deducting, which is
25 Claim 23H. Mr. Morgan.

1 MR. MORGAN: Yes, Your Honor. As one would expect,
2 deducting happens to be closely related to monitoring, and
3 the obvious reason I say that is that, as the patent
4 explains, when you use the first method where you time the
5 call and you converted your money to time and you time the
6 call, at the end of the call, you then subtract.

7 Now, ironically here, again, this is where it becomes very
8 strange. Ironically here, T-Mobile is saying that you deduct
9 at the end of the call. That happens to be what's disclosed
10 in the first method I described where you convert the time,
11 you measure the time, and then you deduct. So what they've
12 done is taken a piece out of the second method where you're
13 actually continuously calculating the cost and subtracting it
14 as the call goes on. They've taken that out of the second
15 method, because that's what they likely say for the element
16 of monitoring, and then go back to the first method and say,
17 well, the deduction happens at the end. This is the ultimate
18 of picking and choosing. I mean, we're at least trying to be
19 consistent.

20 So what they've done, Your Honor, is said to you, in the
21 first place use the method of second embodiment, use the
22 method that continuously calculates and subtracts. That's
23 what they say they're monitoring. And, of course, when you
24 do that, you don't have to subtract anything at the end of
25 the call. It's already been done. But when it comes to the

1 end of the call, go ahead and subtract, which is the first
2 method. Totally antithetical. So basically what they've
3 done is their construction of deducting is absolutely
4 antithetical to the construction of monitoring.

5 The simple fact is both ways are disclosed. Both ways,
6 and this is the words in the claim, monitor the running cost
7 in accordance with its duration. Your Honor, that's what the
8 claim says. I can't imagine anything more in accordance with
9 its duration than monitoring the time, and when the duration
10 of the time reaches a limit you've set that says you've got
11 no more money, you shut the call off. That's method one. In
12 accordance with its duration. It's not monitoring the cost
13 in accordance with its time charge. It's monitoring its cost
14 in accordance with its duration. That's exactly what it
15 says.

16 Interestingly enough, that's also consistent with the
17 prior statements that counsel just referred to. If you look
18 at them carefully, you see not one of them says you actually
19 monitor costs as it goes. Each of them talks about, for
20 example, the call is monitored -- this is page 97, she
21 said -- the call is monitored to determine whether the
22 ongoing cost of the call will exceed the prepayment amount.
23 That is what is accomplished whether you do it by timing, by
24 time, how much available talk time you have. That is
25 accomplished whether you do it by actually subtracting as you

1 go and calculating. So the very statements that counsel is
2 referring to that were made by Aerotel in the past, they'll
3 support either their monitoring our deducting argument; they,
4 in fact, support what we're saying.

5 What we're saying is there's two ways of doing this.
6 Either one assures and determines whether the call will
7 exceed -- the cost of the call will exceed the amount of
8 money. Either one. In the first one, you deduct at the end
9 of the call. Why? Because during the call, what you have
10 calculated is the timing of the call, and you've assessed the
11 time against the available time determined from how much
12 credit was in the account.

13 So at the end of the call, that's what you have to
14 figure -- that's when you have to then deduct the amount of
15 the call, because you haven't been doing -- you haven't been
16 deducting the cost as you went along, in the first method.
17 You've been comparing the time of the call to the available
18 talk time, which is determined in terms of money. In the
19 second method, you actually do the deduction as the call
20 progresses. As the call progresses, the deductions are made,
21 and when it hits zero, you stop.

22 So you've got two methods. Both do exactly what Aerotel
23 said to the patent office. Both are exactly what Aerotel's
24 experts said and exactly what Aerotel said in the previous
25 litigations. Both do exactly what this claim says,

1 monitoring the cost in accordance with the call duration.
2 And then how do you deduct it? In one, you deduct at the
3 end. That's where you just time the call against the
4 available talk time. And the other, you deduct as the call
5 continues. That's when you actually time the call and
6 convert the time as it runs into money and deduct. Figure 1,
7 Figure 2. Thank you.

8 MS. JOST: Your Honor, monitoring the running cost of
9 the call means measuring it. Deducting from the initial
10 prepayment amount the running cost of the call means
11 deducting the running cost of the call. There are two
12 separate steps of Claim 23, Claims 23(f) and 23(h), and
13 counsel is trying to collapse those two.

14 There is no support for making the deduction while the
15 call is ongoing, and Aerotel repeatedly said both in the
16 specification and in its representations to the PT0 and other
17 courts that the running cost is deducted at the end of the
18 call. Aerotel now disputes that because, again, they want to
19 make their infringement arguments about how T-Mobile's
20 wireless system works.

21 I won't go through this in detail, but if you look at the
22 text that the prosecution applies, there are temporal
23 signals. Finally, the system deducts from the initial
24 prepayment amount the running cost of the call. In the 2001
25 reply, when the prepayment amount has been spent, the call is

1 then disconnected; on the other hand, if the caller hangs up,
2 in other words, the call is terminated before the prepayment
3 amount has been spent, the prepaid credit balance is reduced
4 by the cost of the call.

5 Aerotel made these same representations in the prior
6 litigation -- and it's verbatim, so we don't have to go
7 through the slide -- in the NACT case and the RSL case.
8 There's no suggestion that there can be a deduction while the
9 call is ongoing. And in the Verizon case, Aerotel's expert,
10 John Donovan, in Exhibit Y, agreed that deducting -- at the
11 bottom of the page on the left -- deducting from the initial
12 prepayment amount the running cost of the call, that would be
13 done after G, right? He agrees: "Yes. It's kind of like
14 the amount of run. The past tense cost of the call. The
15 call is over, and the running cost is then deducted."

16 Mr. Chandler agreed with the same thing -- this is his
17 claimed construction report -- in the Verizon case as well.
18 Looking at 23H, deducting from the initial prepayment amount
19 the running cost of the call. The interpretation at the end
20 of the call, the total cost is debited. The prepaid wireless
21 methodology is trying to read it on the accused system in
22 that case. When a call is completed, the running cost of the
23 call is computed in the event the account balance is debited.
24 There's simply nothing there in the specification or
25 otherwise that shows the deduction that is made while the

1 call is ongoing.

2 And I did want to return to just one point. Counsel
3 suggested that there's an inconsistency between T-Mobile's
4 argument that, I think, relates to insisting that the running
5 cost of the call be measured as a monetary amount. But then
6 perhaps backing away from the language of Column 4 that
7 discusses the peg counter, I want to make sure there's no
8 confusion about what a peg counter is.

9 A peg counter is not simply a timer. It actually has
10 lodging in it. It is a comparator. There is a calculation
11 that is being done by the peg counter. We're not left with
12 merely some computation of time. When Step 23(f) is
13 performed, the running costs must be portrayed as a dollar
14 amount. And then when you get to 23H, at the end of the
15 call, that dollar amount, the accumulated cost of the call,
16 is deducted from the prepayment amount.

17 This is straight from the intrinsic record and straight
18 from Aerotel's constructions in prior litigation, and we
19 don't see anything other than Aerotel's most recent extrinsic
20 evidence to contradict that.

21 THE COURT: All right. Mr. Morgan, who wants to sum
22 up for your side?

23 MR. MORGAN: I will, Your Honor, I guess by default,
24 since I'm the oldest.

25 Your Honor, what we've tried to do, summing up in our

1 constructions, is to propose constructions that are
2 consistent with what the federal circuit told us to do in
3 Phillips, are consistent with and describe the invention, the
4 invention as disclosed. They are consistent with and
5 supported by the claim language. We try to go through the
6 claim language, what words are there, what words aren't
7 there.

8 So what words aren't there are what seem to be causing
9 T-Mobile so much problem that they want to add them. The
10 claim language from different claims, the fact that Claims 1
11 and 9 are limited to a particular aspect of the invention,
12 that requires any available telephone, and Claim 23 is not.
13 And, frankly, it's hard for somebody, I think, to argue that
14 any available telephone issue is merely, merely -- I love
15 that word -- in a preamble, when, in fact, it relied upon
16 heavily throughout the prosecution. And the very explicit
17 words were relied upon heavily by both the patent office and
18 Aerotel for purposes of finding distinctions and
19 understanding claims.

20 Thus, we've construed special exchange as it should be.
21 We've construed it consistent with the invention. The
22 invention itself is not limited to only any available
23 telephone. Invention itself is broader than that, and the
24 patent describes the broader aspects of it, the way it can be
25 made broader.

1 Claim 23 covers the full breadth of the invention.
2 Counsel noted Claim 23 was added. That's not unusual,
3 especially in situations where a patent application is
4 brought in, for example, from someone from a foreign country.
5 Attorney looks at it and realizes the full breadth of the
6 invention needs to be claimed, and the full breadth of the
7 invention goes beyond any available telephone.

8 Whether or not any available telephone is a requirement,
9 that is not a definition and does not define special
10 exchange. It was never done so in the patent office. I
11 recall back in the patent office, special exchange, any
12 available telephone was treated separately, treated
13 separately in the general discussion and treated definitely
14 separately in talking about the claims.

15 So Claim 23, again, Your Honor, and what we've tried to do
16 in our constructions is recognize that it is written to be
17 sort of the full scope of the invention, not to be limited to
18 particular details and particular any available telephone
19 detail.

20 Now, T-Mobile says, geez, Your Honor, this patent, why, it
21 was written back in 1985. There weren't any cell phones, and
22 if there were, they were the size of a suitcase. Well, you
23 know, it doesn't matter when the patent was written; it's
24 what the invention is that matters. And the invention
25 doesn't care whether you use a landline telephone or a cell

1 telephone. The invention enables a very successful, Your
2 Honor -- and I must tell you, people who do cell telephone
3 systems have taken licenses with this patent just like a
4 landline and have taken settlements.

5 The invention enables a very successful system for using
6 prepaid -- for having prepaid telephone services, and it
7 doesn't care whether those prepaid telephone services are
8 cellular or landline or satellite, for all I know. What it
9 cares about is how you go about doing it and the steps going
10 about doing it. The invention concept is the same regardless
11 of what system you're in.

12 That's what's got T-Mobile, I think, disturbed is that
13 they come along in 2000 or whenever it is, and sure,
14 telephone systems have evolved. But the invention itself,
15 because of its scope and its breadth and what it does, is
16 broad enough and is viable and is usable and has been used in
17 all kinds of telephone systems, whether they're cellular or
18 anything else.

19 So what are we here about? Okay. It's time to bite the
20 middle claims, it's time to find stuff we can cram into those
21 claims that aren't there in Claim 23. It's time to take the
22 word any available telephone, which isn't in there, and
23 somehow find a way to cram it in there.

24 When I started a long time ago, I had a mentor, an older
25 lawyer who used to use a phrase in briefs called gossamer

1 affection. I asked him what that was. He said it's when you
2 take a piece there, a piece there, a piece there, and you
3 cobble together what at first glance looked like a decent
4 argument. But when you start to take the pieces apart and
5 when you go and look carefully at what the patent office
6 itself actually said, the gossamer confection proves gossamer
7 and falls apart. That's what we're looking at. A piece
8 there, a piece there. Try to pull it together and you go
9 read what was actually said, it falls apart.

10 Words like "dial," we didn't have to go outside the patent
11 to find dial. Again, it's the invention. The patent
12 describes and uses that term. It talks about a redialer. A
13 redialer, Your Honor, doesn't push any buttons. A redialer
14 isn't pushed by the user. A redialer is a piece of software
15 and hardware that receives information and sends out signals.
16 Nobody pushes any buttons. It's not the user doing it, it's
17 the system doing it. And the patent calls that dialing. We
18 didn't reach somewhere to try to find some weird definition
19 of dialing. We looked at how the patent used it.

20 T-Mobile, well, it's got to be a push button, it's got to
21 be a rotary thing, basically trying to find a common thing
22 some people might think about without taking into account
23 what the patent says and, in fact, not just the patent, what
24 the technology says.

25 First, Aerotel didn't make up a redialer. They've been

1 around for a long, long time. Aerotel didn't make up the use
2 of the world "dial" to describe the sending of signals. It's
3 the redialer. We tried to be consistent. And at bottom,
4 what we're trying to do is provide constructions that are
5 consistent with and describe the invention and are consistent
6 with the record, intrinsic and the extrinsic record.

7 And, again, the fact that that invention -- I won't call
8 it precedent, but if you look around and see how much -- how
9 pervasive this technology in prepaid has become, perhaps it
10 was precedent. It is still as valuable today as it was back
11 then. It is important, and we shouldn't let people who have
12 used it try to, in effect, put a straightjacket on it, slice
13 off an arm here and there, add an antenna that doesn't belong
14 there, and turn it into something that is not the invention,
15 nor to say that they are not using it.

16 So in short, I think what we've done is try to come up
17 with a fair and a consistent and viable construction for a
18 very good invention. I think what we've seen on the T-Mobile
19 side is virtually every possible thing that they could drag
20 into those claims, from the disclosure, from anyplace else,
21 they have tried to drag in. Claim construction is not an
22 exercise in dragging limitations of disclosure. Thank you,
23 Your Honor.

24 MS. JOST: Your Honor, the '275 patent issued from an
25 application filed in 1985 and expired in 2005. The federal

1 circuit has an abundance of clarity that the claimed terms
2 must always be construed first looking at the words of the
3 claims given the plain meaning as would have been understood
4 by one skilled in art at the time of the invention and read
5 in view of the specification.

6 As the federal circuit constructed, the construction that
7 stays true to the claimed language and most naturally aligned
8 with the patent's description of the invention will be in the
9 end the correct construction.

10 A patent is limited to what is claimed, and T-Mobile's
11 proposed constructions are supported by the words of the
12 claims themselves, the specifications, and by the very
13 extensive record that we have in the case, the prosecution
14 history, and the re-examination history. They don't seek to
15 engraft any limitation on the claimed terms at issue, rather
16 they are seeking to ground the construction of the asserted
17 claim in the clear language and context of the claim
18 specification, and to hold Aerotel to the disclaimers and the
19 admissions that it had made before to the PTO and in prior
20 litigation.

21 And it's critical to the proper construction of to this
22 patent to keep in mind what Aerotel itself claimed it
23 intended. This invention is concerned with telephone
24 systems, and more particularly, with telephone system wherein
25 when a prepayment is in force, the prepaid party can use any

1 telephone to make calls, including cell calls. That's the
2 description of the invention, and that is the common thread
3 that runs through all of the claims, all of the
4 specifications in the prosecution history.

5 The federal circuit has instructed courts that it is
6 improper to construe the claims with an aim to either include
7 or exclude an accused system, but that's exactly what Aerotel
8 tries to do. Every one of Aerotel's proposed claim
9 constructions tries to twist the claim of Claim 23, which
10 describes a wire line base, 1-800 prepaid card method of
11 making prepaid calls, around T-Mobile's wireless approach to
12 making prepaid telephone calls.

13 And we heard counsel repeatedly throughout the arguments
14 today, when asked to point to places in the specification or
15 in the intrinsic record supporting their construction,
16 instead turned to the discussion of T-Mobile's accused
17 system. That's improper. And it's irrelevant for purposes
18 of claimed construction what T-Mobile's system does or does
19 not do. It's only relevant to consider the system for
20 purposes of providing a context for the construction of the
21 claims.

22 Aerotel is veering far beyond that limit. Aerotel is
23 essentially asking the court to ignore the context and logic
24 of the claims and the specification, and to set aside the
25 entire intrinsic record of Aerotel's prior statements.

1 They're trying to divorce the plain from the context in order
2 to set up their infringement arguments, and that's simply
3 improper.

4 To give you an idea of why they're making the claims, I
5 want to reference the T-Mobile system, not to give you a
6 guide as to how to construe the claims, but at least to try
7 to put some of these arguments in context.

8 T-Mobile's wireless prepaid system can't be accessed to
9 make a prepaid call from any phone. To make a prepaid call
10 using the T-Mobile system, you have to have, as I said
11 earlier, a wireless device that is activated on T-Mobile's
12 network and that is associated with a T-Mobile prepaid
13 account. T-Mobile doesn't have any special exchange that can
14 be reached for purposes of making a call by dialing its
15 number, and the user experience, when a user makes a prepaid
16 call, is like any other cell phone: They dial the number
17 they want to call and push send. There's no code input,
18 there is no special exchange dialed in the manner described
19 by the '275 patent.

20 Aerotel is reaching. To try to stretch Claim 23 around
21 the system, Aerotel is turning its back on the language of
22 the claims and is instead looking exclusively, at least in
23 its briefing, to the declaration of Mr. Chandler, which is
24 extrinsic evidence created solely for the purpose of
25 litigation, and which, because it conflicts with not just

1 with the claims in the intrinsic record, but also Aerotel's
2 representations in prior litigation, the court is obligated
3 to disregard that. And the federal circuit has directed that
4 that conflicting extrinsic testimony must be disregarded in
5 *Phillips* and *Medtronics*, and more recently in the *1-800 Adept*
6 case.

7 The public knows the functions in the patent case history
8 requires that now T-Mobile's construction be adopted because
9 they are consistent with the entire record.

10 THE COURT: Thank you, Counsel. The court will take
11 this matter under advisement. We will endeavor to get you a
12 ruling in terms of the construction in a timely fashion.
13 Other than that, thank you very much. I've found the
14 argument helpful this morning. We'll be in recess.

C E R T I F I C A T E

I, Nancy L. Bauer, CCR, RPR, Court Reporter for the United States District Court in the Western District of Washington at Seattle, do hereby certify that I was present in court during the foregoing matter and reported said proceedings stenographically.

I further certify that thereafter, I have caused said stenographic notes to be transcribed under my direction and that the foregoing pages are a true and accurate transcription to the best of my ability.

Dated this 12th day of November 2009.

/S/ Nancy L. Bauer
